BIOMARKERS IN BREAST CANCER

JOANNE MORTIMER, MD

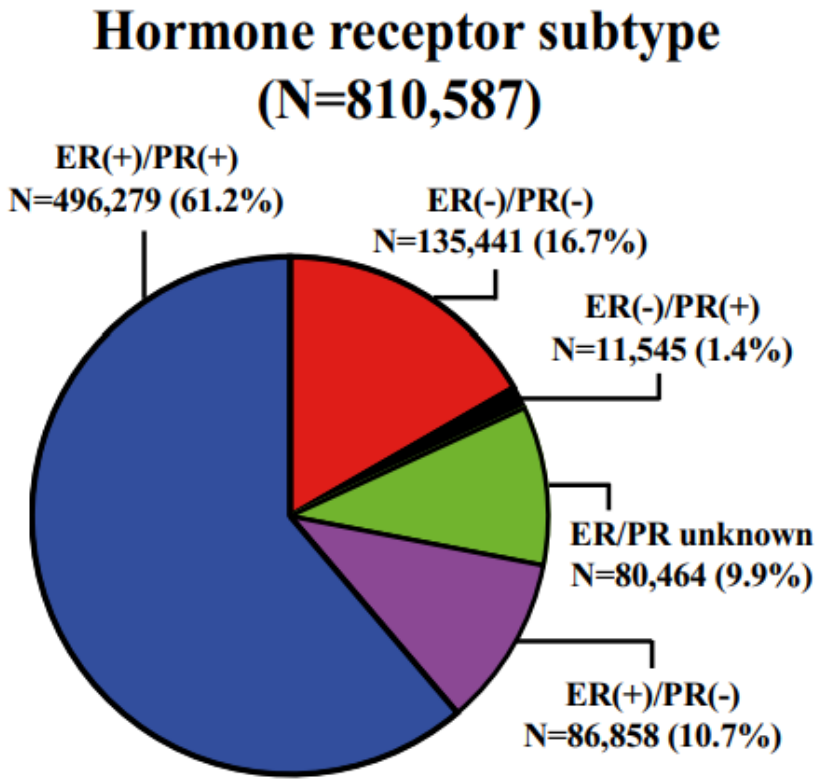
Vice Chair, Medical Oncology and Therapeutics
Director, Women's Cancers Program
Baum Professor of Women’s Cancers

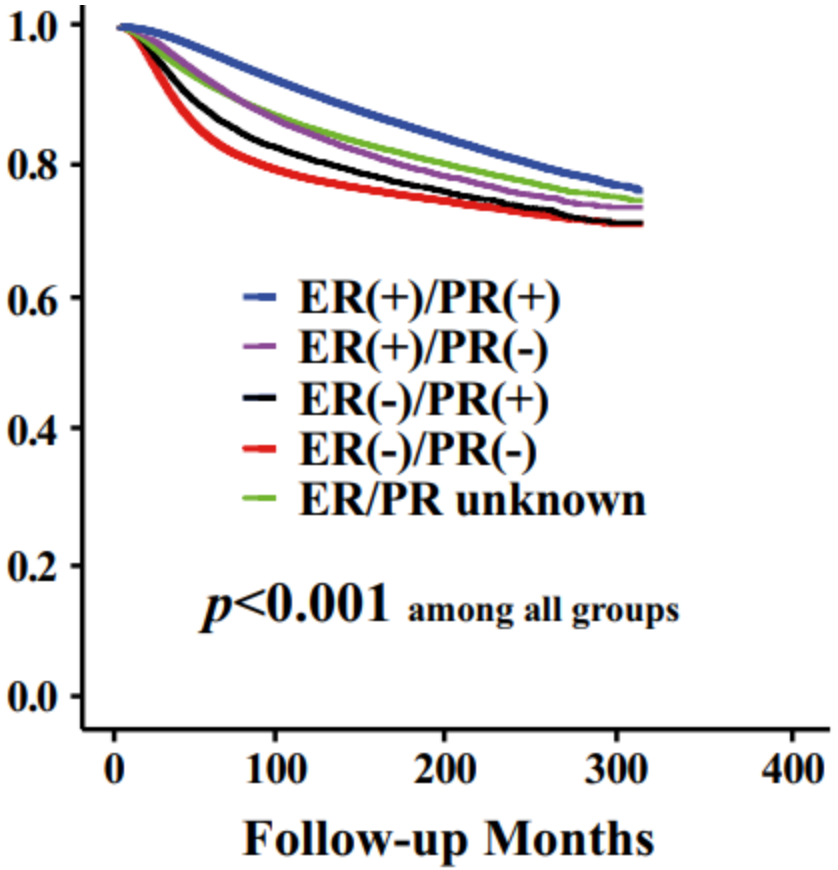
Biomarkers in breast cancer

- Traditional
  - Nodal status
  - Tumor Size
  - Tumor grade
  - ER, PR
  - HER2
- Molecular
  - Oncotype
  - MammaPrint
- Functional Imaging
  - Estrogen
  - HER2
- Predictive Markers
  - ESR1
  - ER, PR
  - HER2
  - PIK3/akt
- Potential Targets
  - ER, PR
  - HER2
  - Trop 2
  - HER3

Long-term prognostic Effect of hormone receptor subtype on breast cancer

810,587 women with operable invasive cancers from SEER with mean f/up of 94.2 months

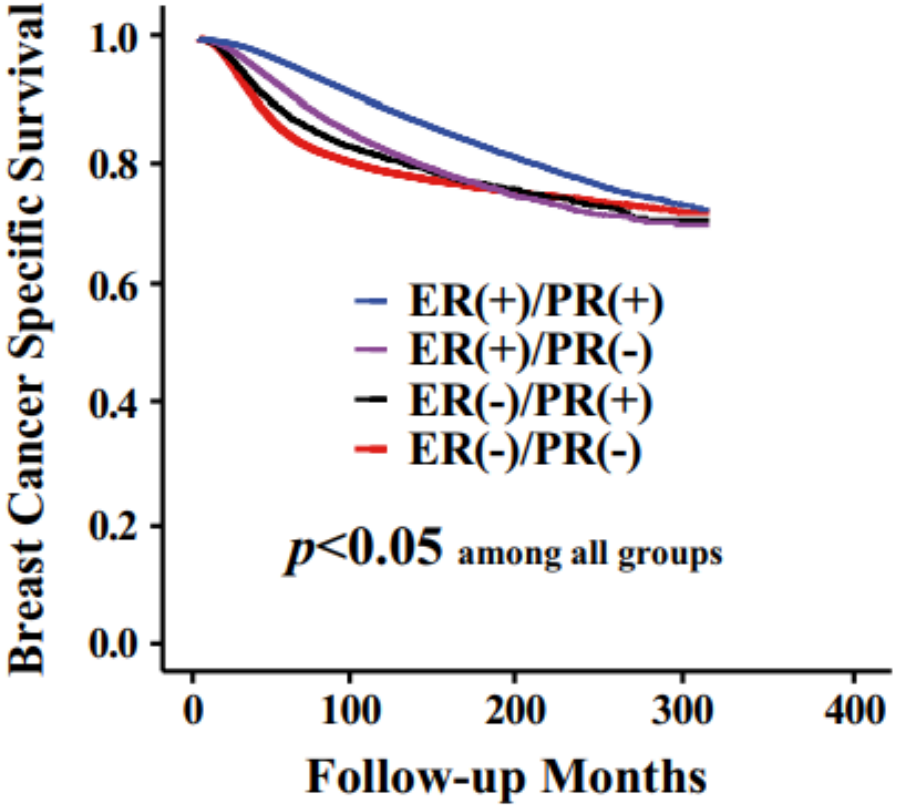




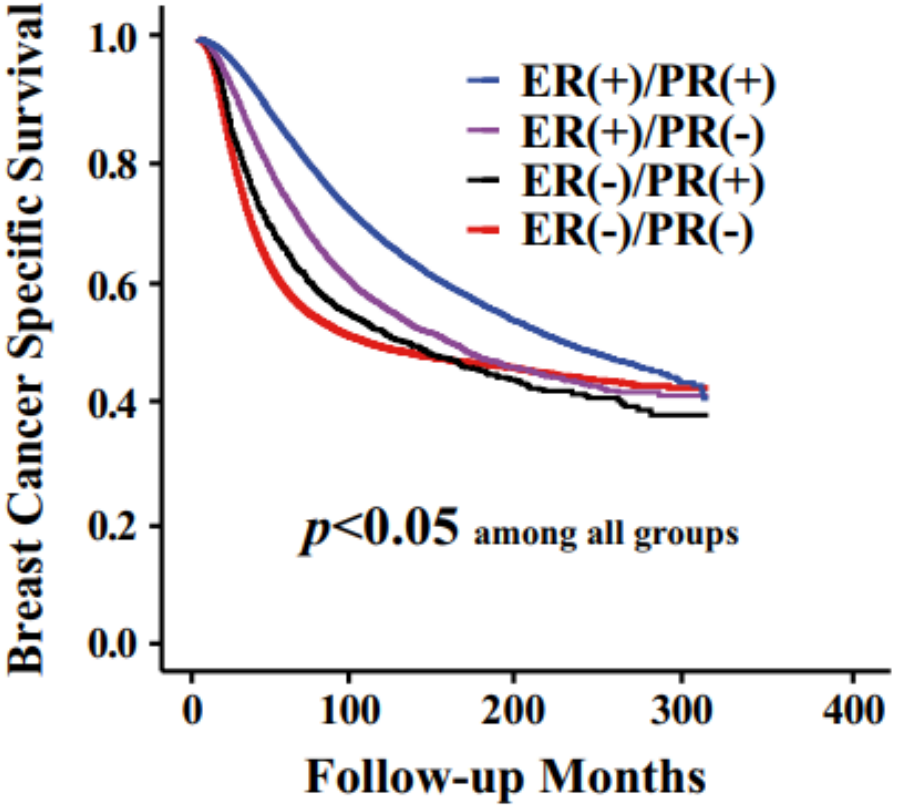
Hwang, Br Ca Res and Treat 202;179:139-151

Long-term prognostic Effect of hormone receptor subtype on breast cancer

810,587 women with operable invasive cancers from SEER with mean f/up of 94.2 months



Stage II (N=295,378)



Stage III (N=108,926)

Hwang, Br Ca Res and Treat 202;179:139-151

Significance of PR in Stage IV ER+ Breast Cancer Response to Tamoxifen

		% Response with PgR Level (fmol/mg)		
Patient Subset	Number	<10	10-99	≥ 100
All	342	43	53	64
ER < 50 fmol/mg	120	31	42	59
ER ≥ 50 fmol/mg	222	53	59	66

Ravdin, JCO 1992;10: 1284-1291

Nex Generation Sequencing directs subsequent therapy in HR+ disease

KEY ✓ Approved in Indication ~ Approved in Other Indication × Lack of Response

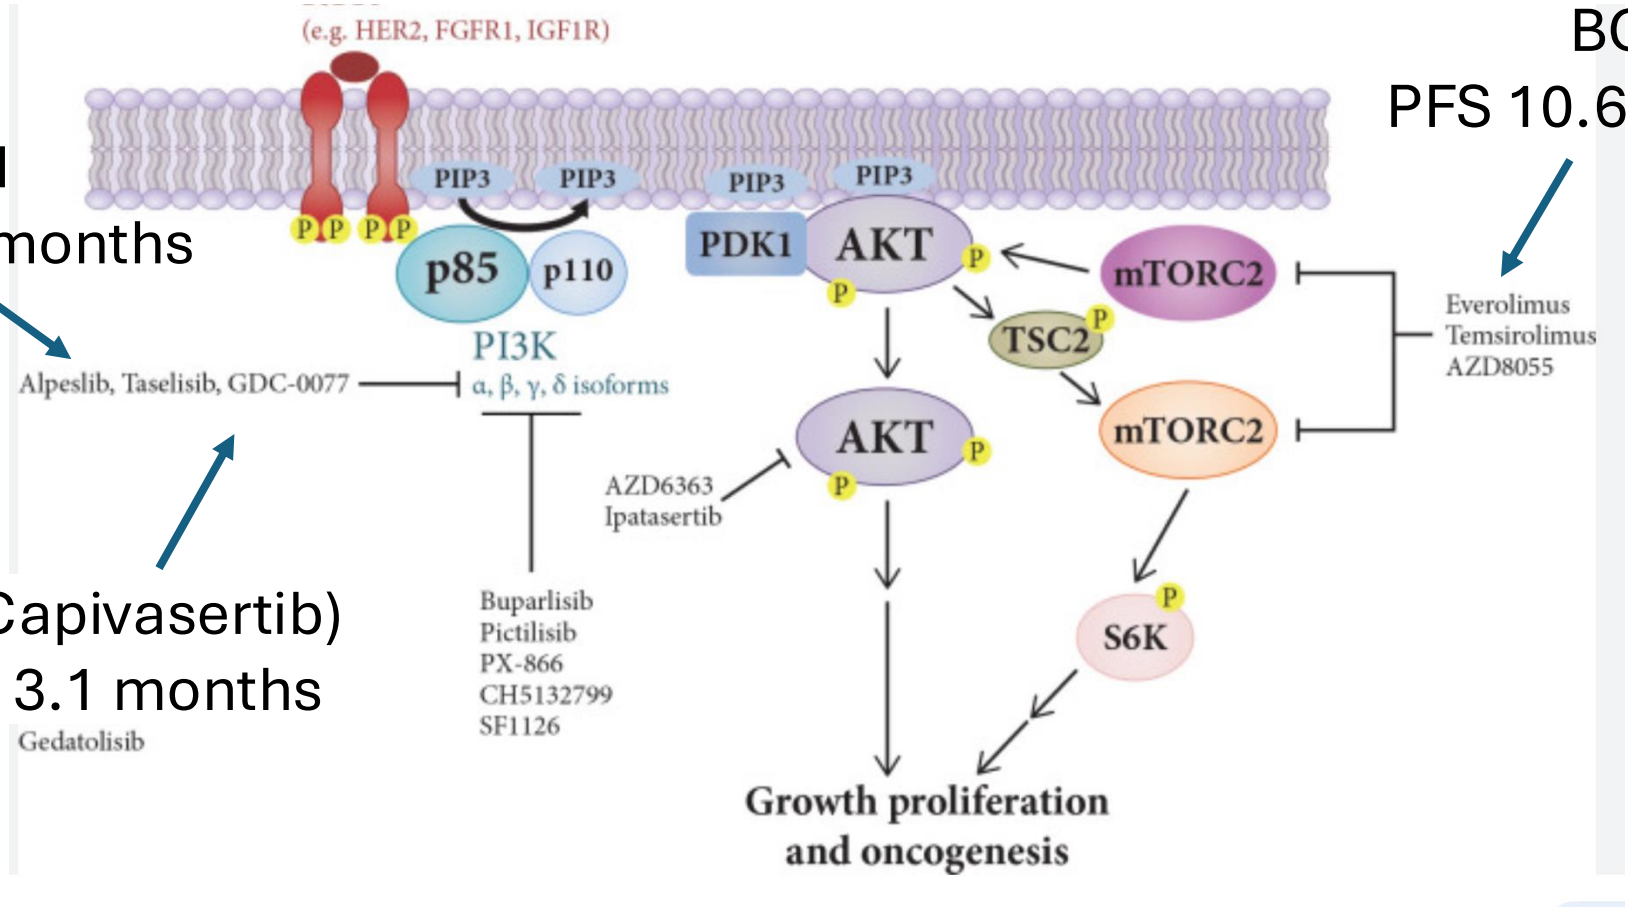
Detected Alteration(s) / Biomarker(s)		Associated FDA-approved therapies	Clinical Trial Availability	% ctDNA or Amplificati
PIK3CA	H1047R	✓ Alpelisib+fulvestrant, Capivasertib+fulvestrant	Yes	1.2%
AKT1	E17K	✓ Capivasertib+fulvestrant	Yes	0.5%
ATM	D2507D	Synonymous Alteration§	No (Synonymous)§	1.0%
BRCA2	H595P	None (VUS)§	None (VUS)§	0.6%
RIT1	R106Q	None (VUS)§	None (VUS)§	0.6%

PI3K/AKT/mTOR pathway

SOLAR 1
PFS 11 vs 5.7 months

BOLERO 2
PFS 10.6 vs 4.1 months

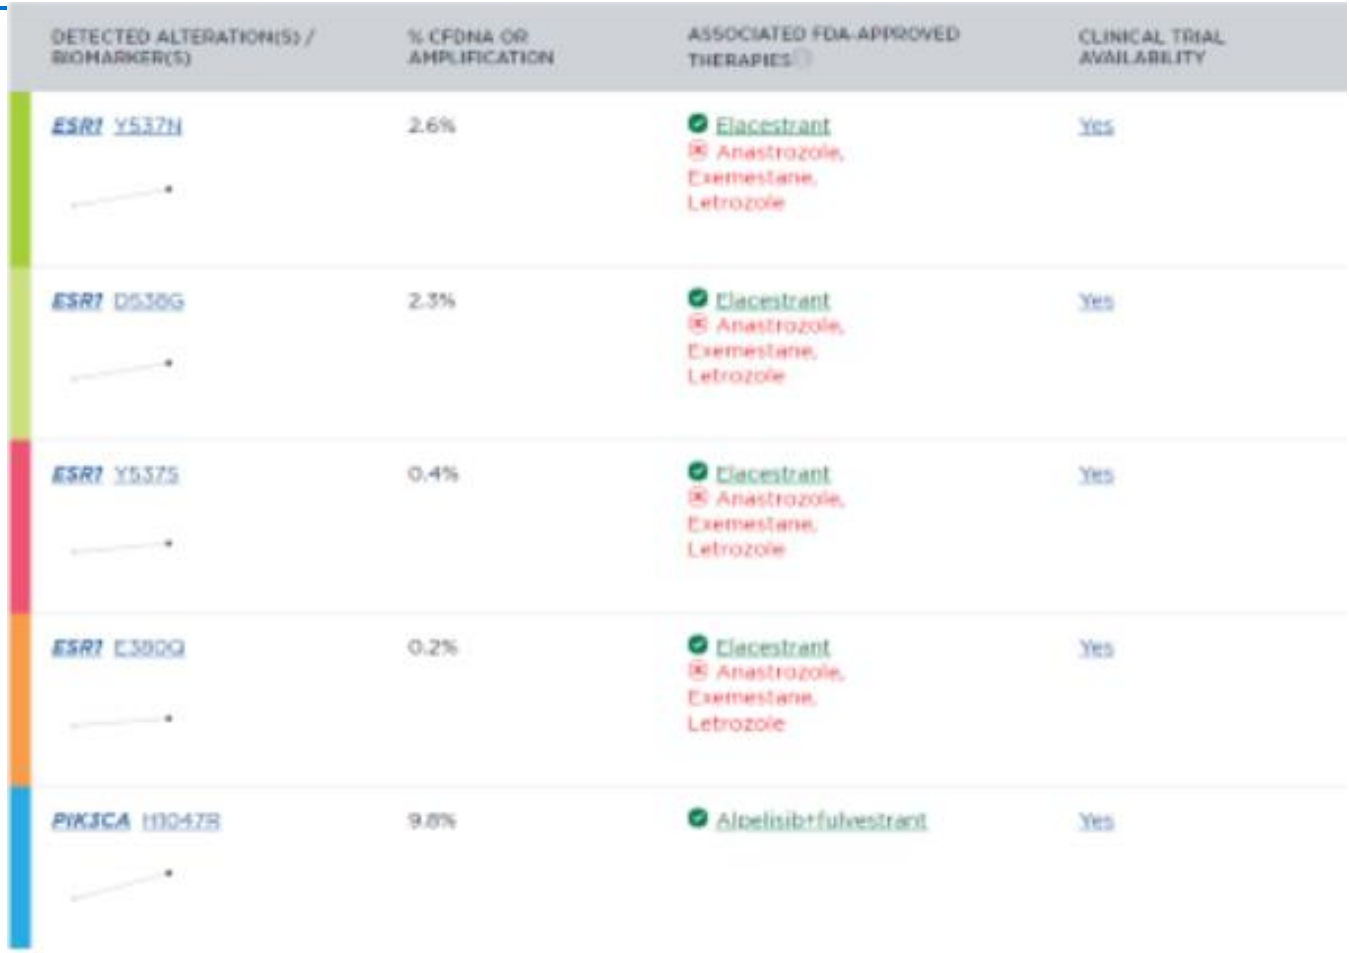
Capitello (Capivasertib)
PFS 7.3 vs 3.1 months



Baselga, NEJM 2012;366:520-526
Andre, NEJM 2019;380:1929-1940
Turner, NEJM 2023;388:2058-2070

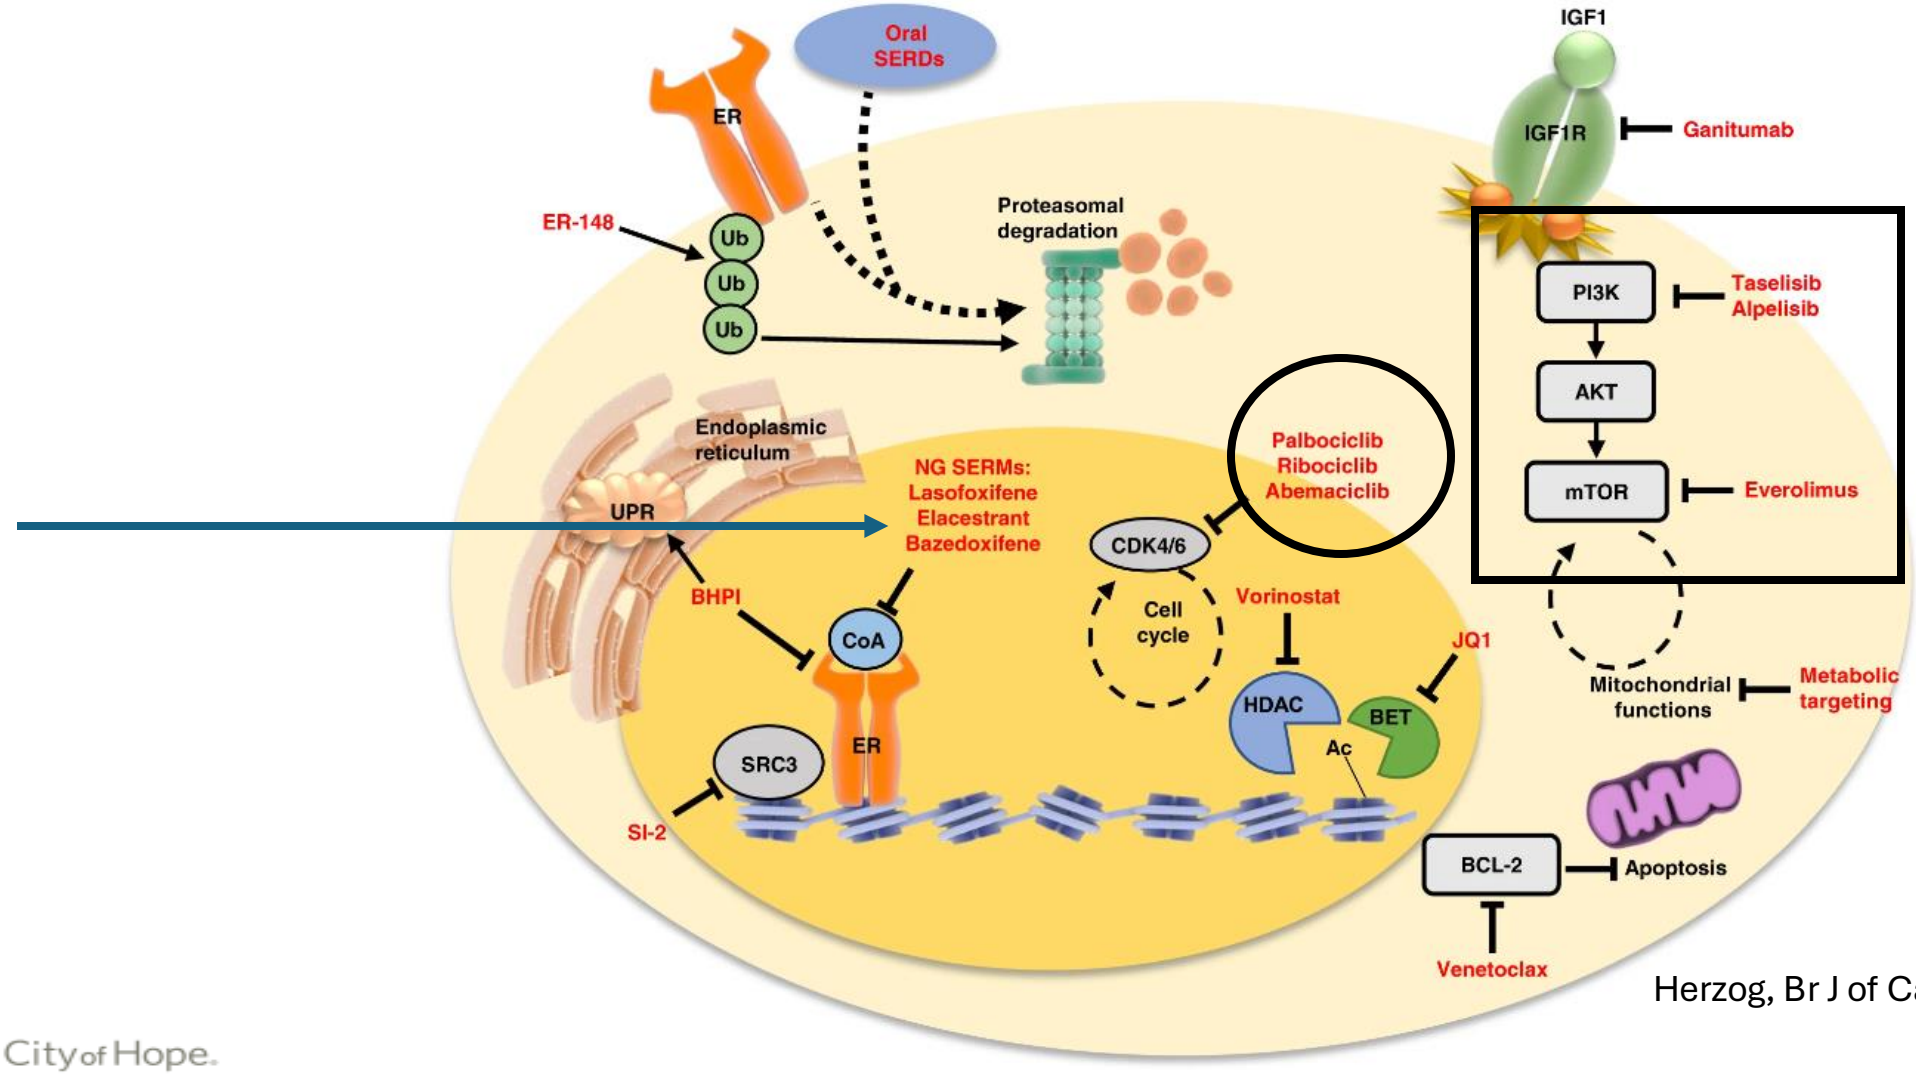
ESR1 mutations

- Are seldom present at diagnosis
- Likely to occur as a result of the “pressure” of therapy
- May predict for lack of efficacy of Ais
- Direct therapy to SERMs and SERDS



DETECTED ALTERATION(S) / BIOMARKER(S)	% CFDNA OR AMPLIFICATION	ASSOCIATED FDA-APPROVED THERAPIES	CLINICAL TRIAL AVAILABILITY
ESR1 Y537N	2.6%	Elacestrant Anastrozole, Exemestane, Letrozole	Yes
ESR1 D538G	2.3%	Elacestrant Anastrozole, Exemestane, Letrozole	Yes
ESR1 Y537S	0.4%	Elacestrant Anastrozole, Exemestane, Letrozole	Yes
ESR1 E380Q	0.2%	Elacestrant Anastrozole, Exemestane, Letrozole	Yes
PIK3CA H1047R	9.8%	Alpelisib+fulvestrant	Yes

ESR 1 mutation

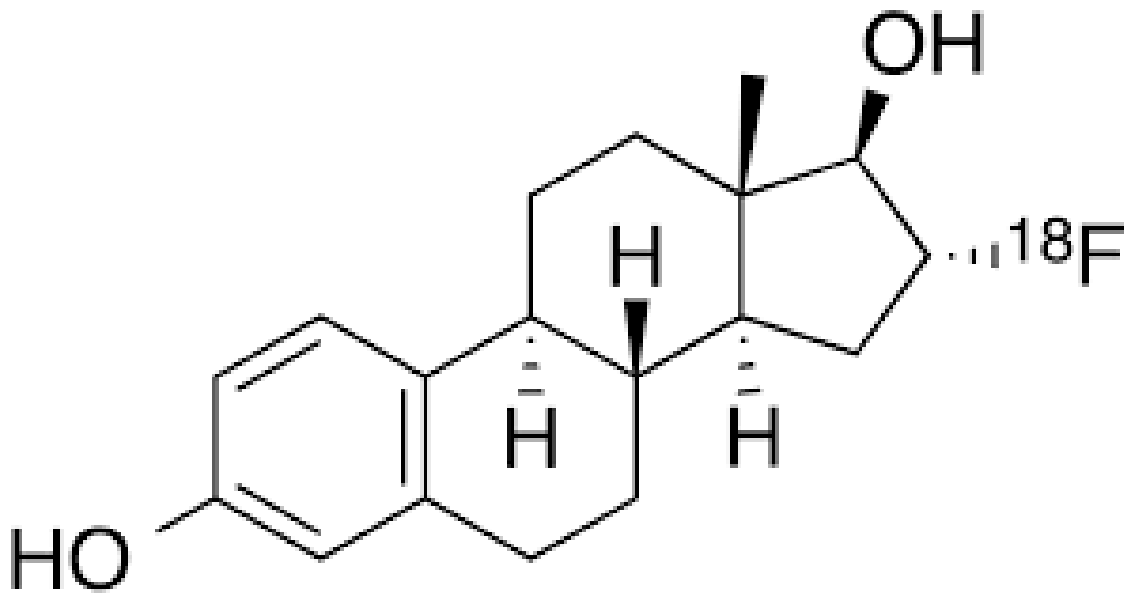


Herzog, Br J of Cancer 2022;126:174-186

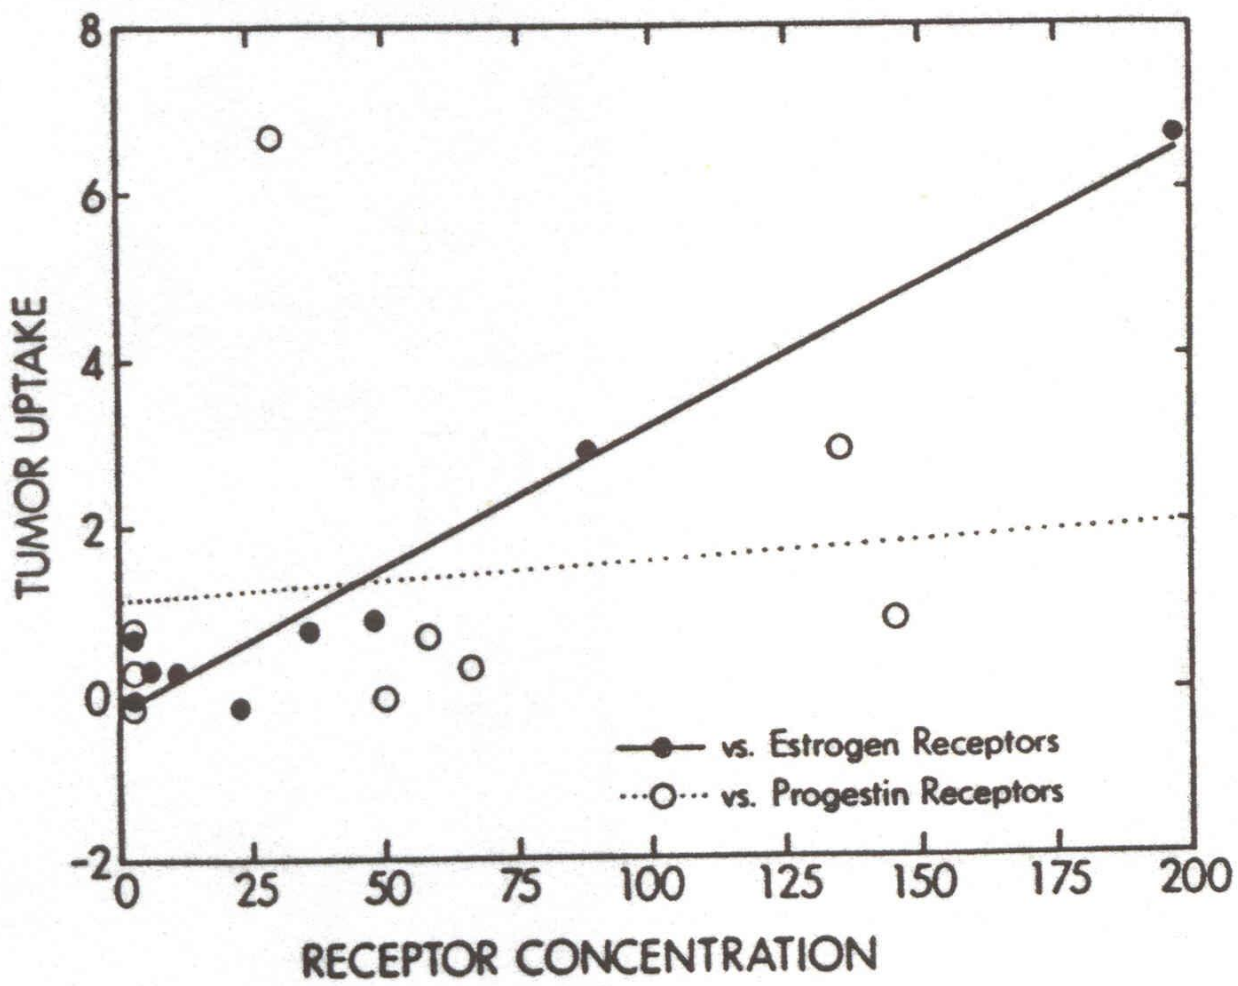
Functional Imaging

- Information about biologic activity
- Provides information about the entire patient
- Limited by lesion size

16α[18F]fluoro-17β-estradiol



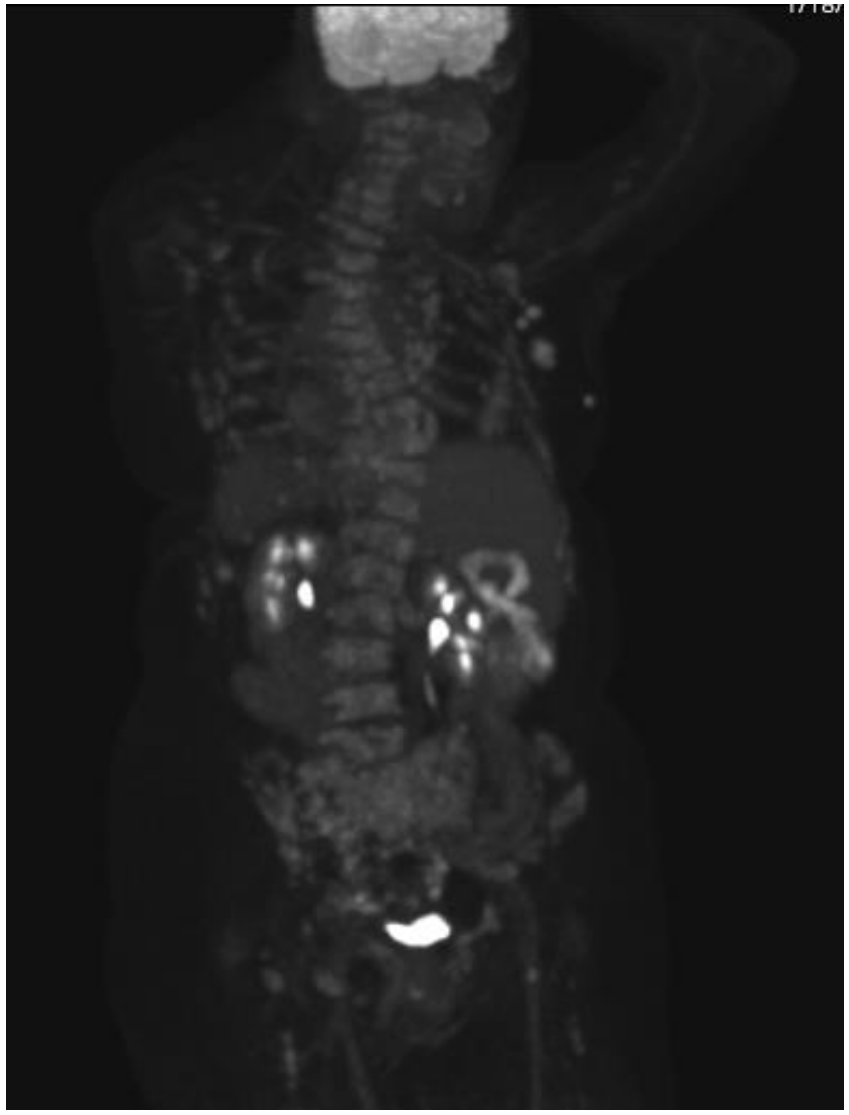
Relationship Between ^{18}F-FES-PET Uptake and Quantitative ER



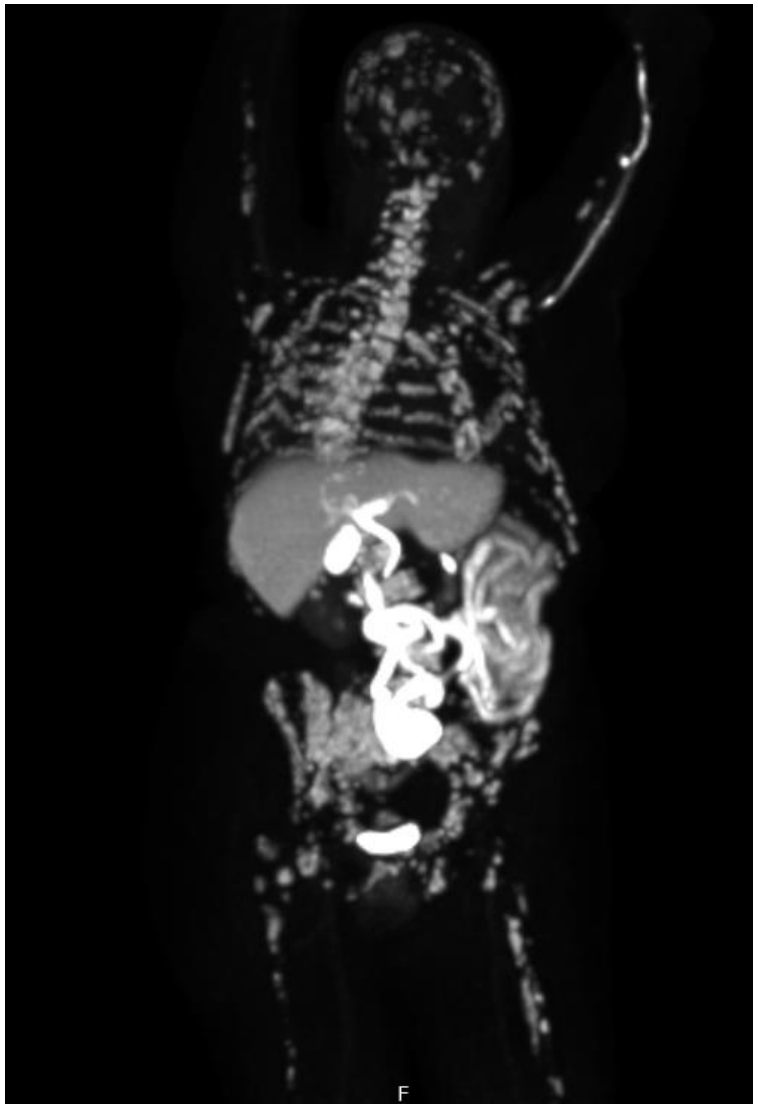
Wahl. Radiology 169;45-48, 1988

FES PET imaging

^{18}FDG



^{18}FES



Summary of ^{18}FES-PET Use

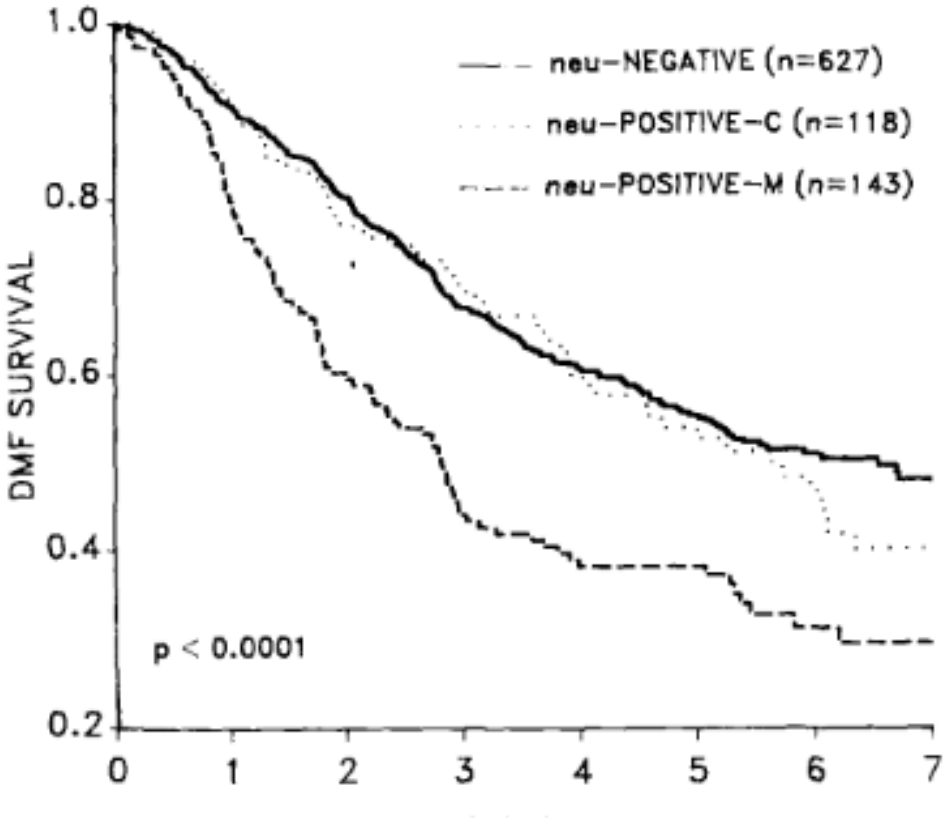
- Determine estrogen dependence when bx not possible
- Predict lack of response to endocrine therapy
- Identifies low grade disease

- Not helpful with liver metastases
- Not reliable in pts on SERD

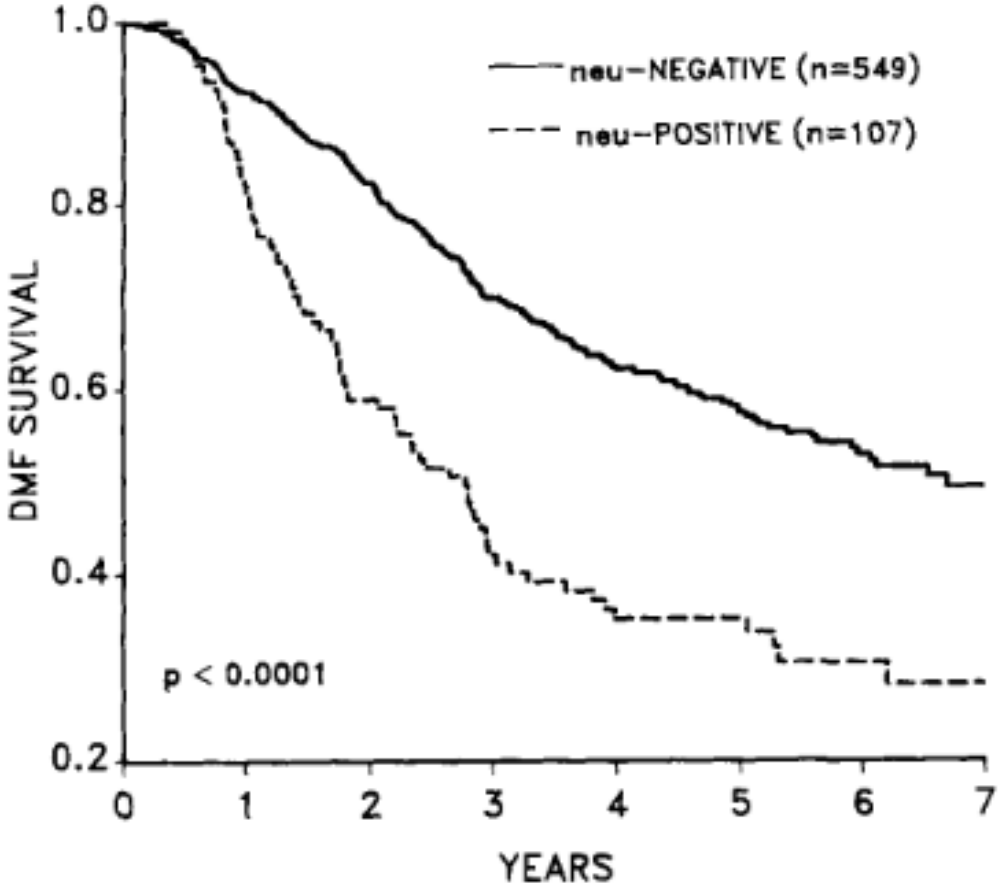
Her2-Positive
Breast Cancer

Prognostic significance of HER2/*Neu* oncoprotein expression in node-positive breast cancer

888 breast cancer from 1980-1986 (Quebec)

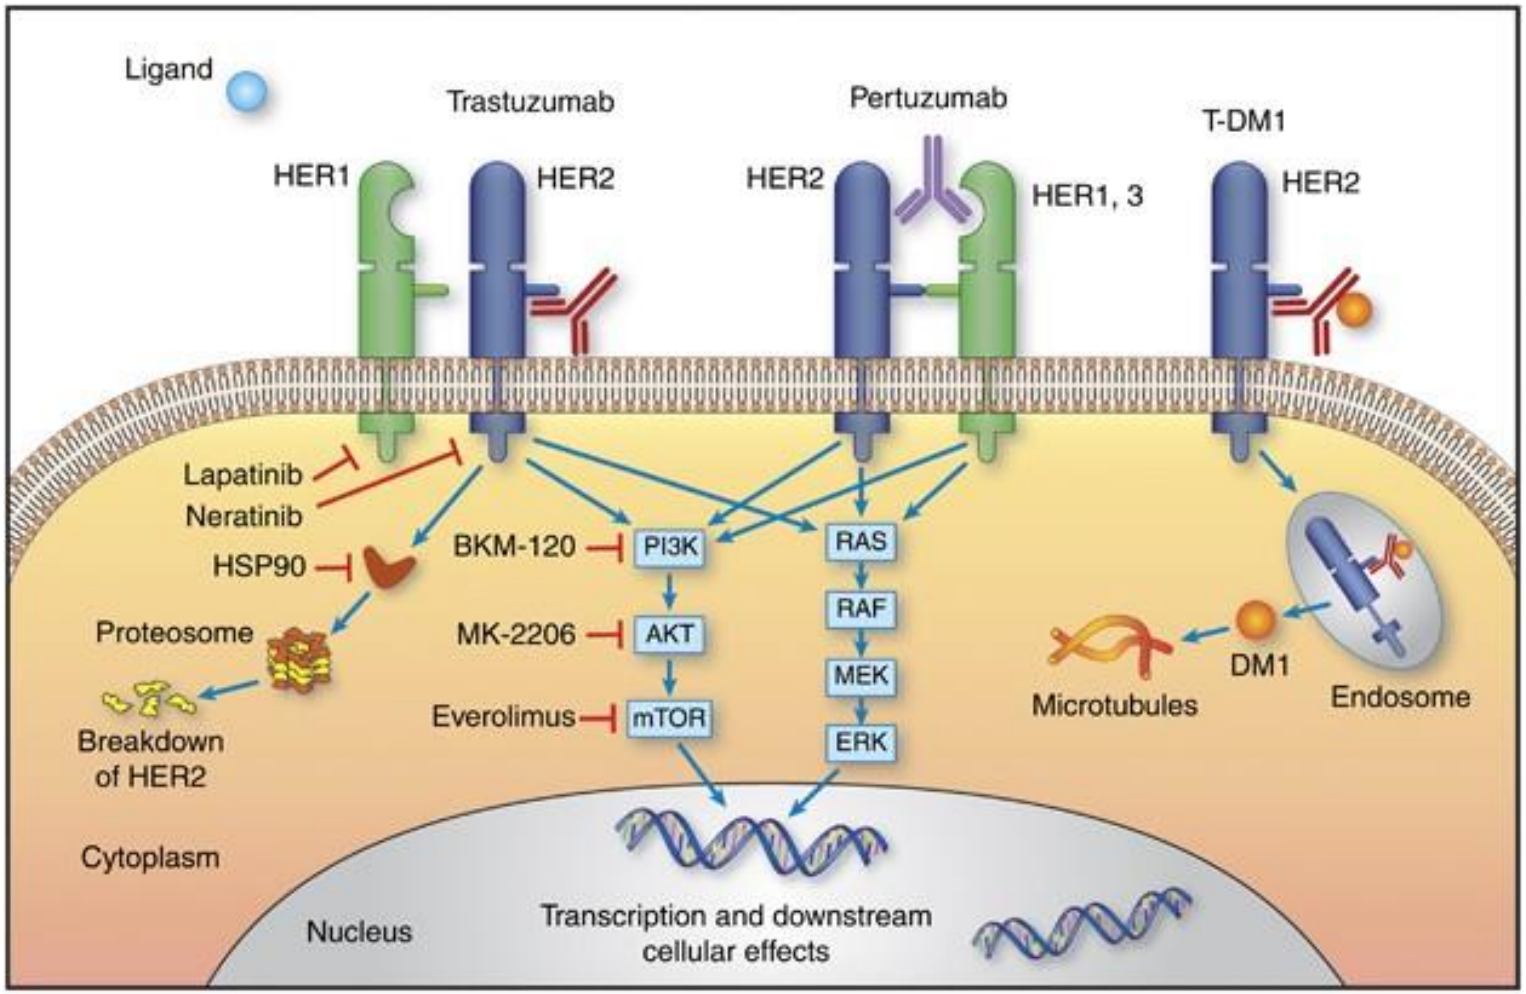


Membrane more important than cytoplasmic staining



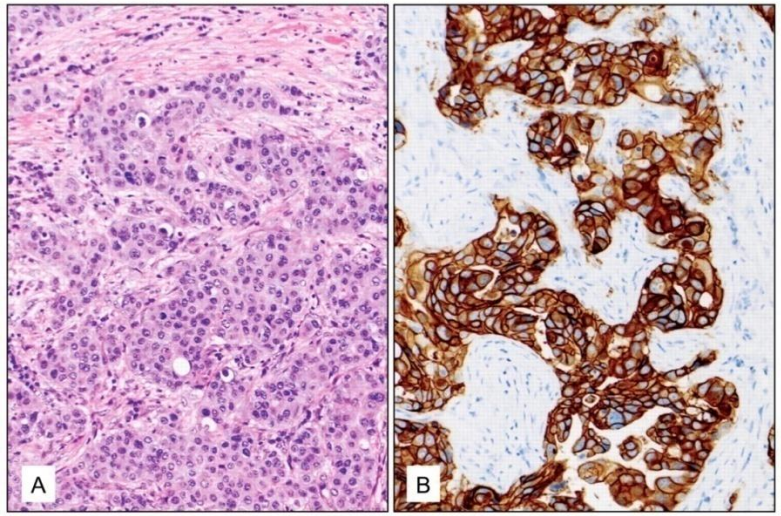
Tetu, Cancer 1994;73:2359-2365

HER2 as a target

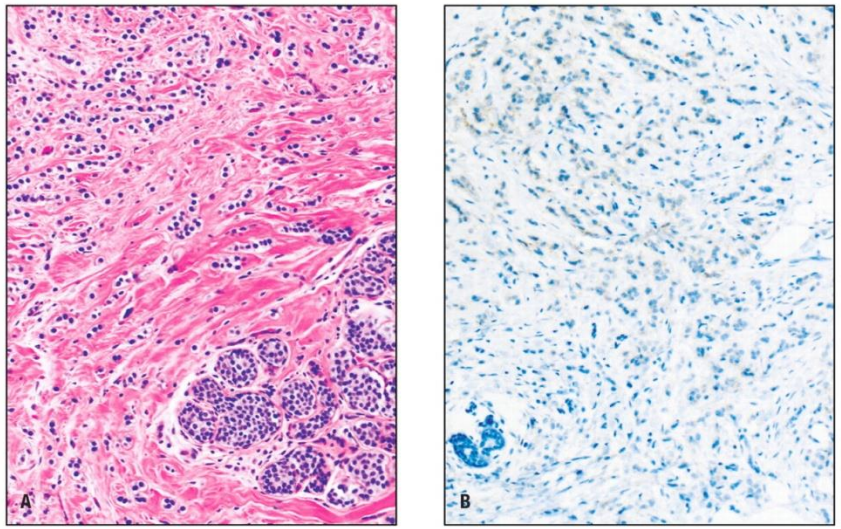


Singh, British J of Ca 2014;111:1888-1898

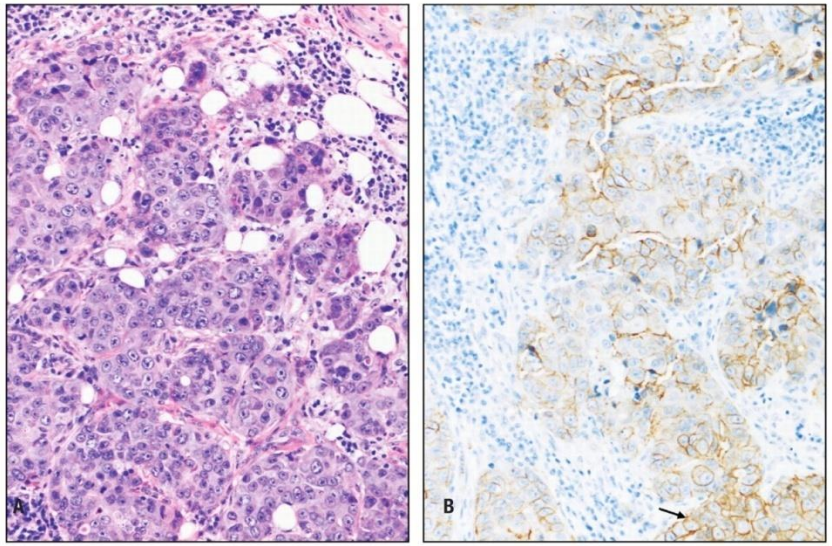
HER2 Assessment by Immunostaining



Positive 3+



Negative 0



Equivocal 2+

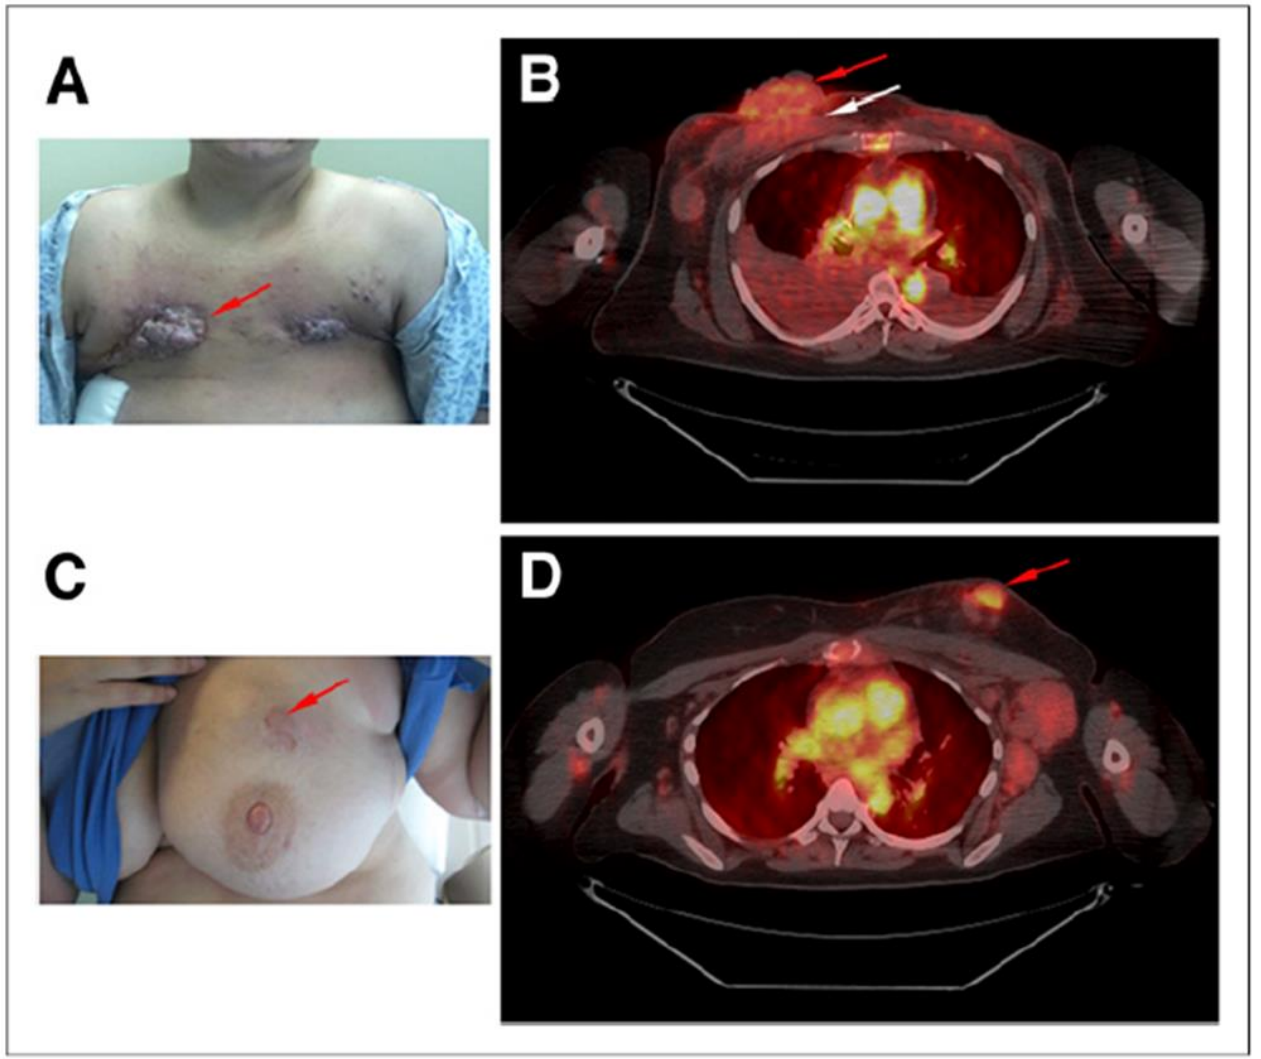
FISH

Hicks, Lab Medicine 2011:42:459-67

We have utilized ^{64}Cu-DOTA-Trastuzumab to image women with advanced breast cancer with HER2 1+, 2+, 3+

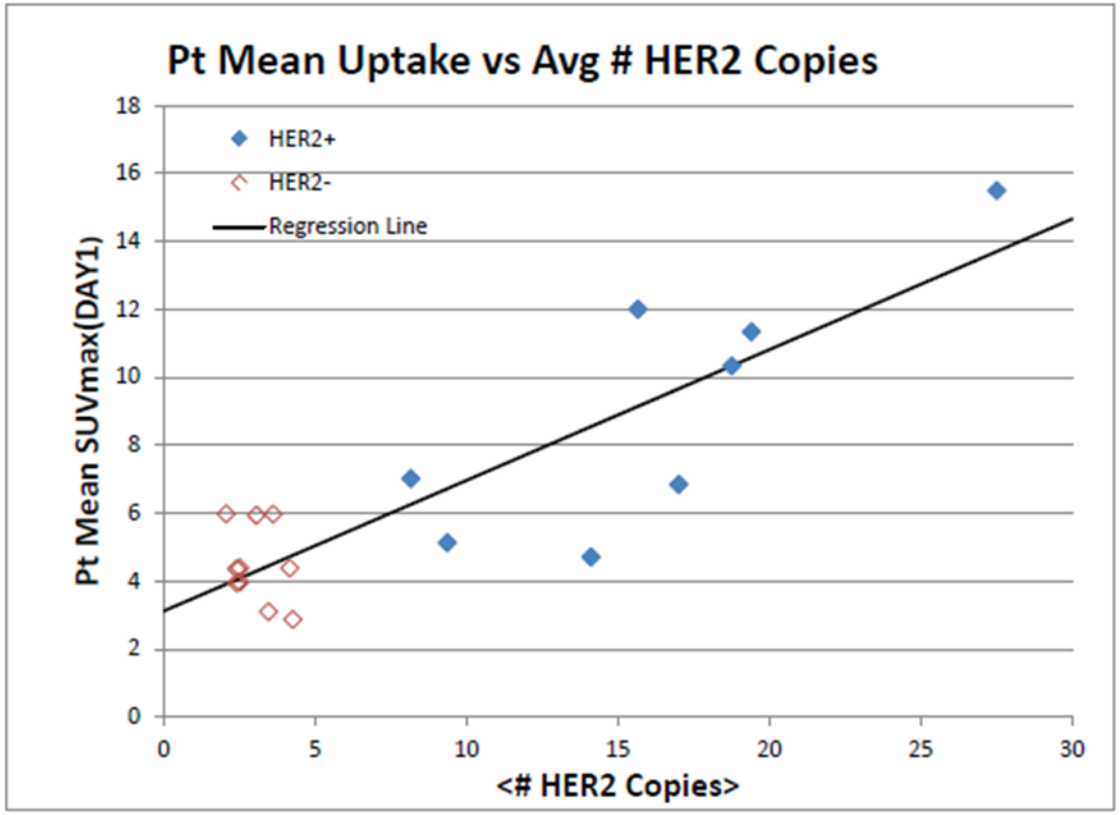
IHC 1+

IHC 3+



Mortimer, J Nucl Med 2018;59:38-43

Tumor uptake of ^{64}Cu-DOTA-Trastuzumab is highly correlated with HER2 gene amplification



CONCLUSION: Gene amplification explains high-side variability of tumor uptake.

REMAINING QUESTION: What causes the variability about the regression line?
E.g., the 2 patients with avg # of HER2 copies closest to 15 vary nearly 3-fold in mean uptake, which could well make the difference between response & non-response.

^{64}cu-DOTA-trastuzumab PET Imaging ,to predict response to TDM1 in Advanced HER2+ Breast Cancer

Eligibility

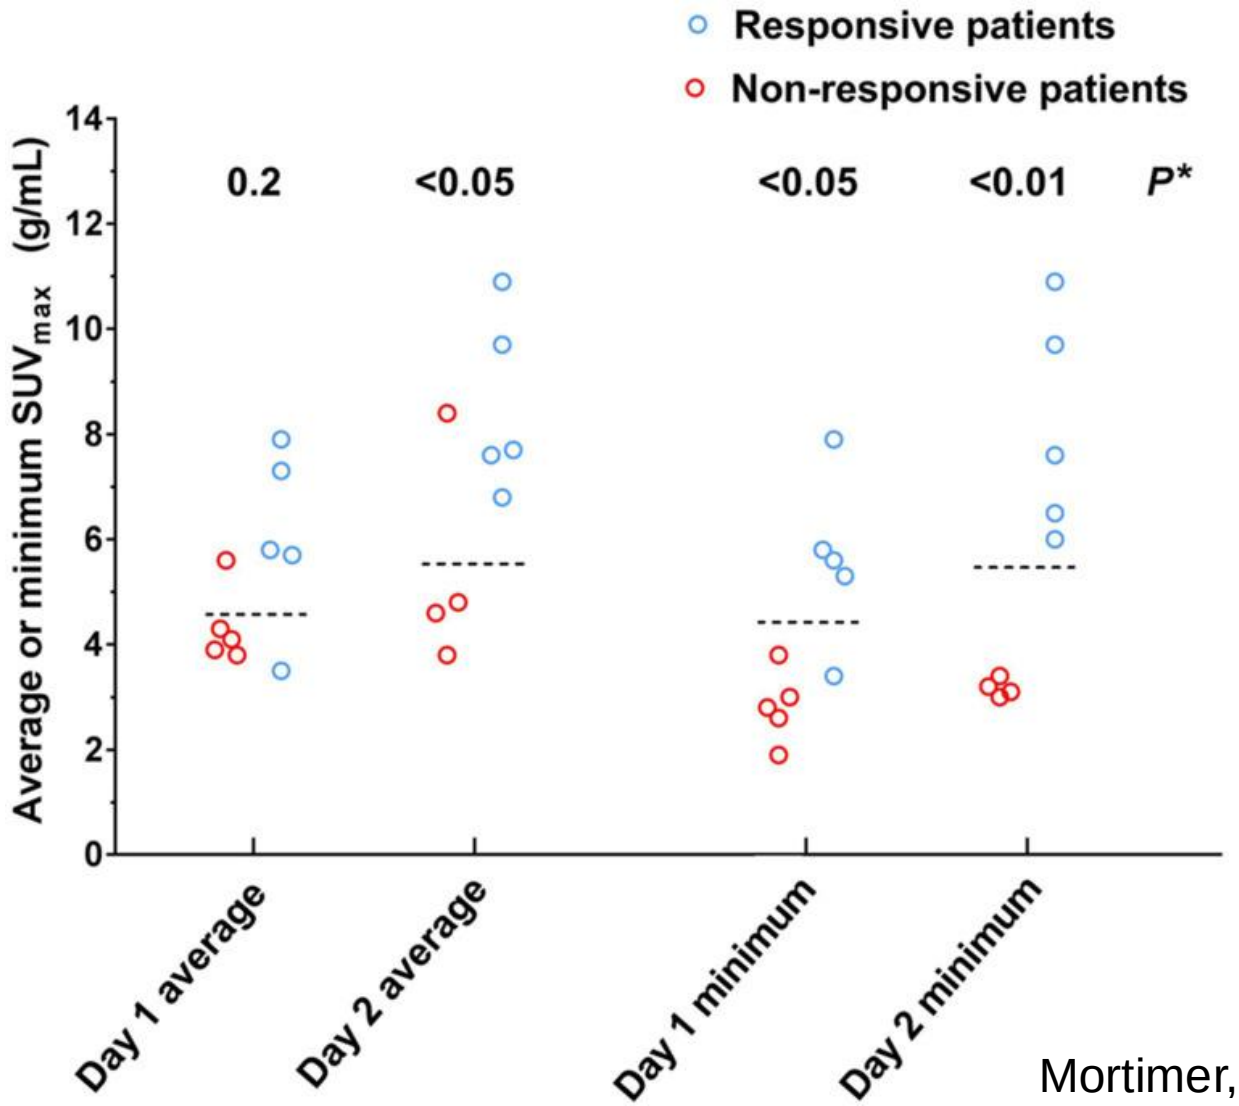
- Women with locally advanced or metastatic disease
- Biopsy confirmed HER2 +
- Planned treatment with TDM1
- No prior HER2 directed therapy for > 21 days

Baseline	Study Day 0	Study D 1 and 2
^{18}FDG-PET/CT	Trastuzumab 45 mg IV	^{64}Cu-trastuzumab PET/CT

TDM1 3.6 mg/kg IV Q3w until disease progression

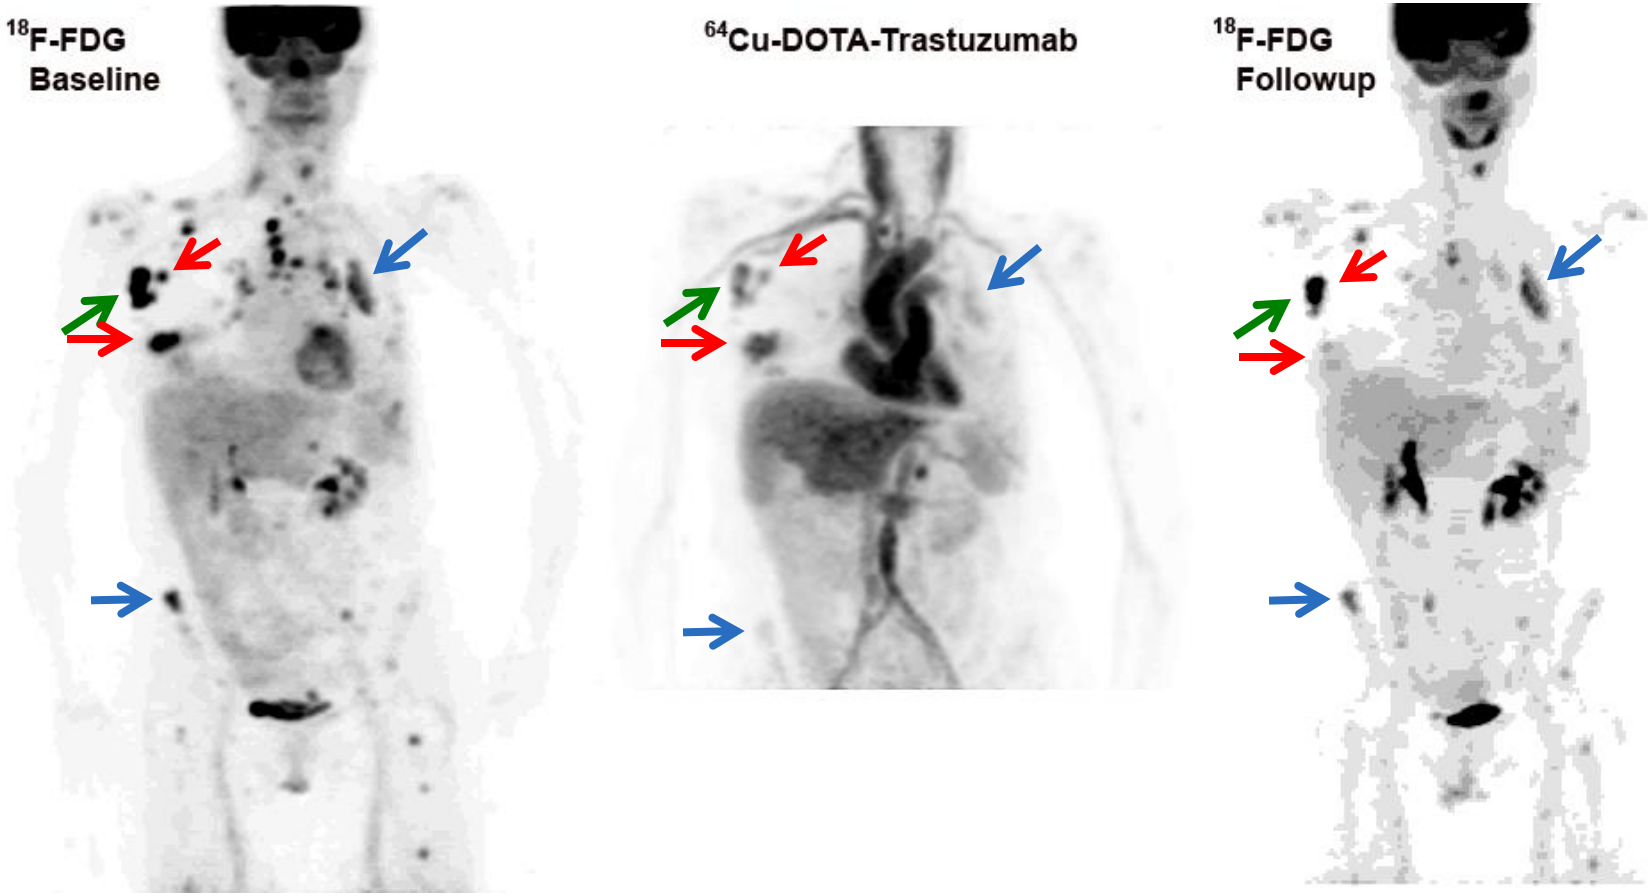
Restaging every 6 weeks

64Cu-DOTA –trastuzumab PET to predict response to TDM1 in advanced breast cancer



Mortimer, J Nucl Med 2022;63:1145-48

Mixed Trastuzumab Uptake and Response



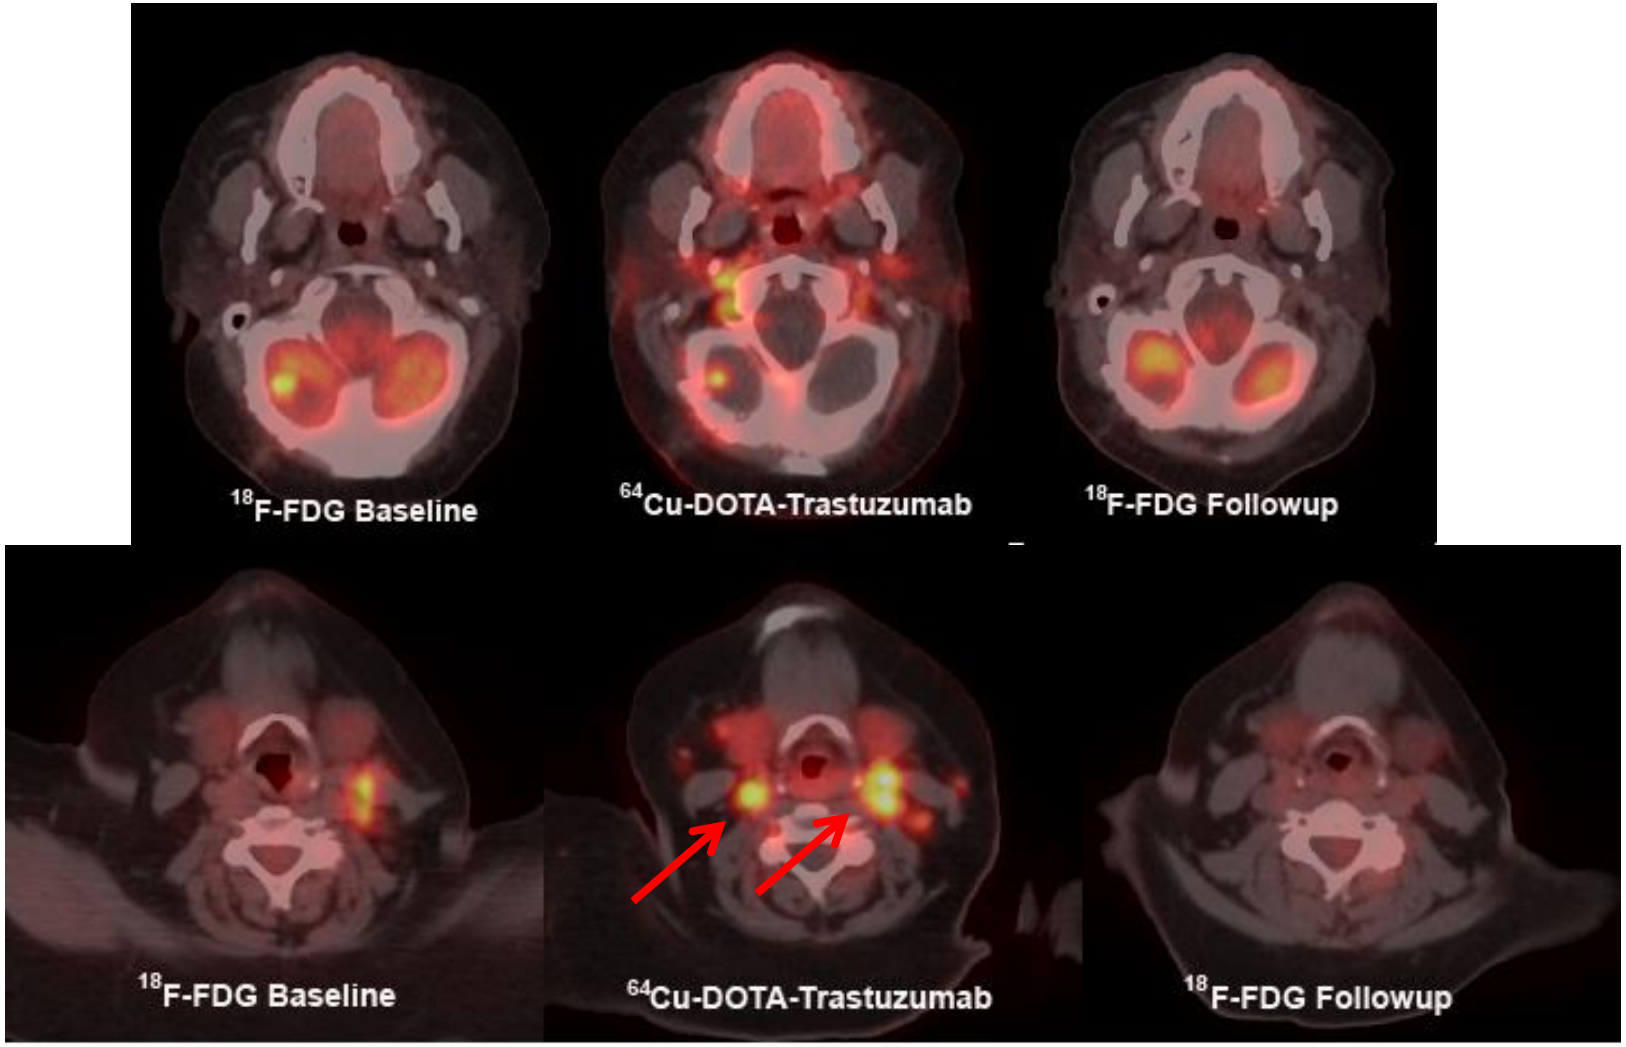
responding lesion

non-responding lesion

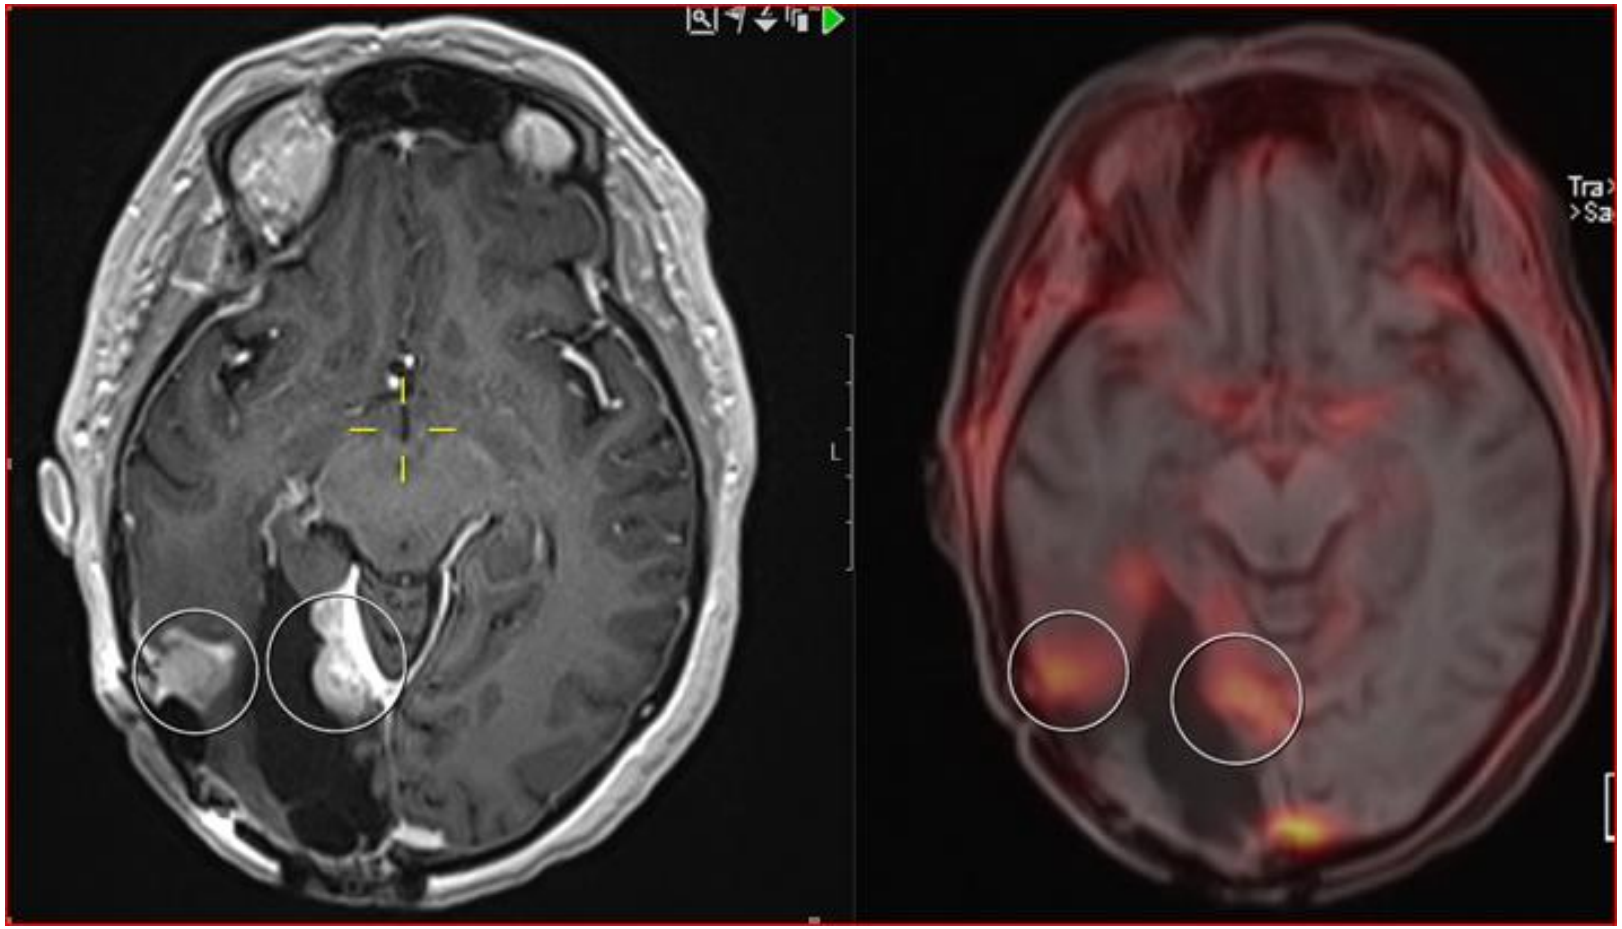
lesion with mixed response

Mortimer, J Nuc Med 2019;60:23

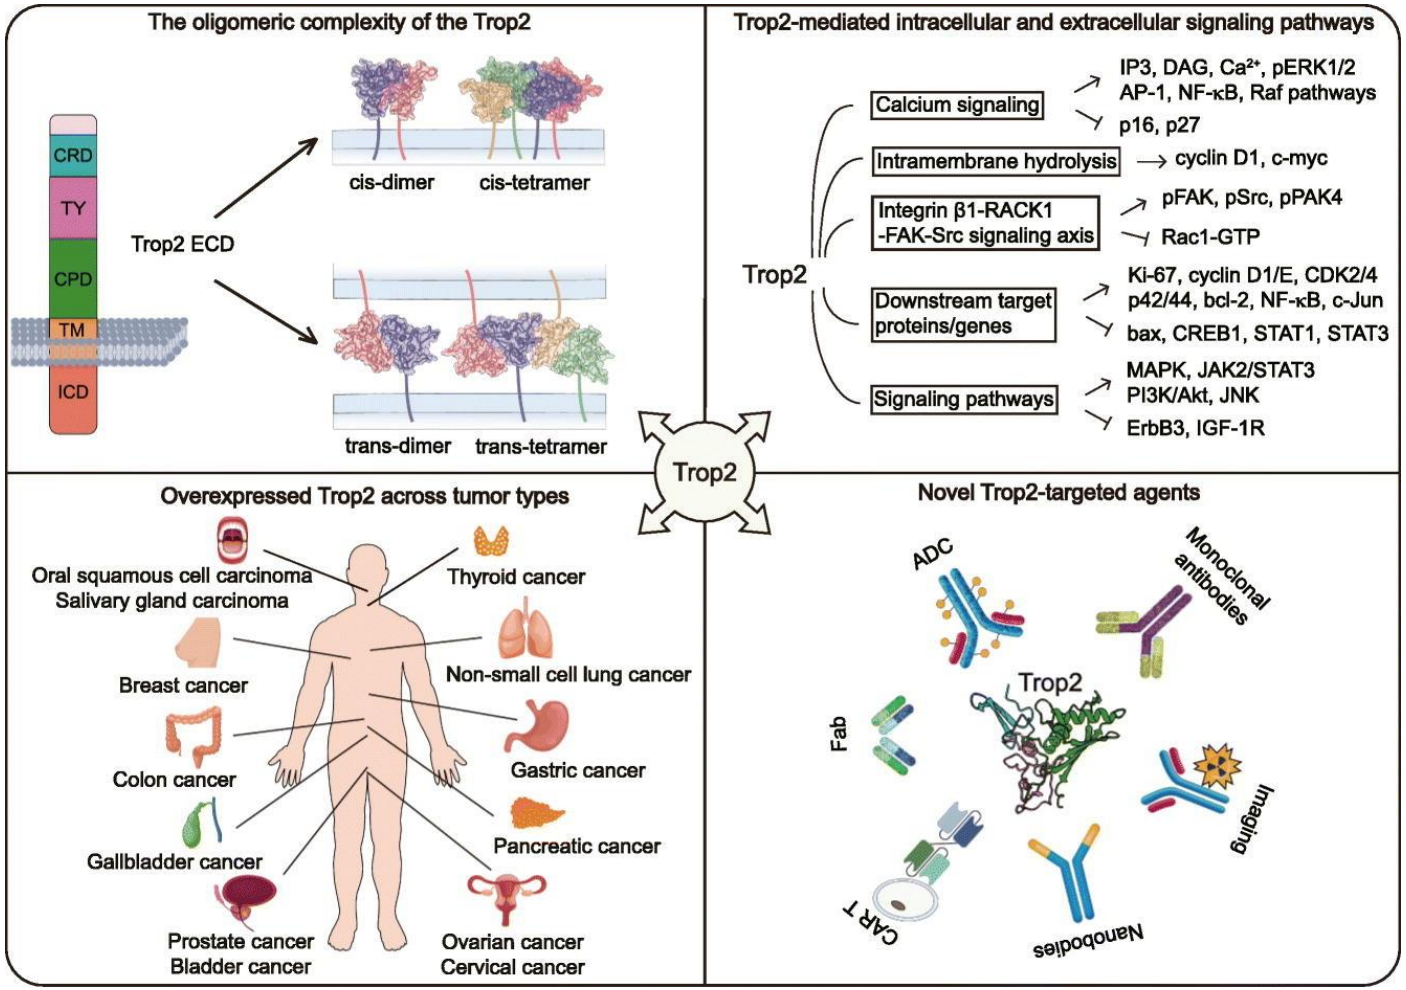
^{64}cu-DOTA-trastuzumab PET Uptake in brain



Currently studying ^{64}cu-DOTA-trastuzumab PET to predict for CNS response to trastuzumab-deruxtecan

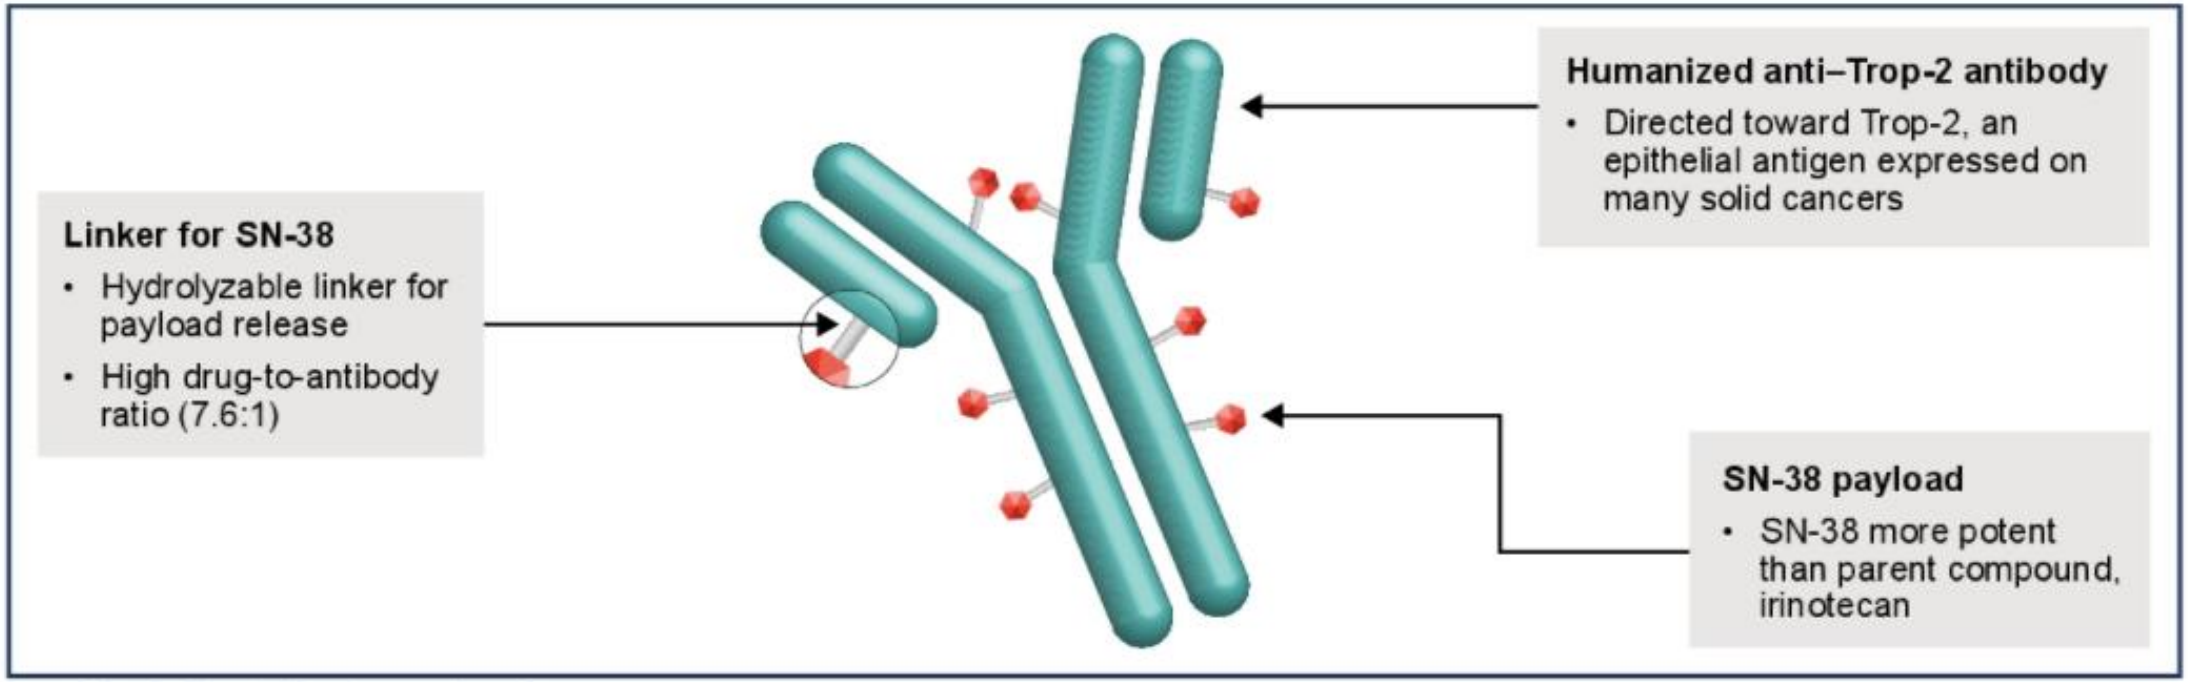


TROP2 and Cancer



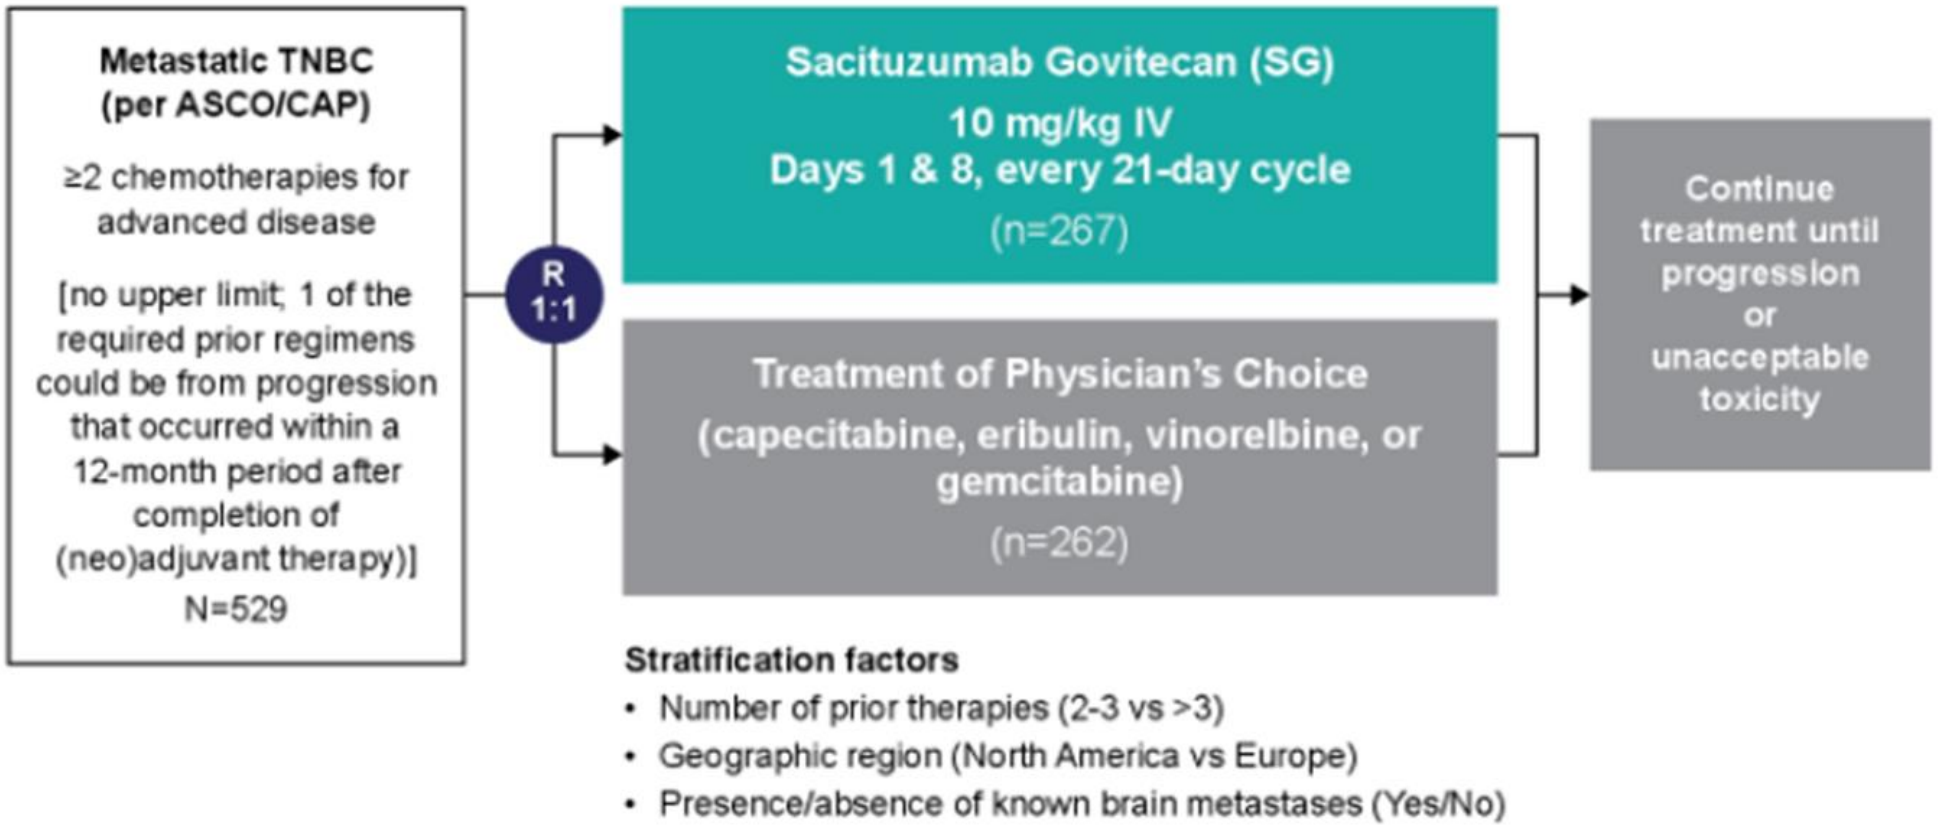
Liu, Pharm and Ther 2022: 108296

Sacituzumab is approved in advanced HR+/HER2- and TNBC



Trop-2, trophoblast cell surface antigen 2.

Sacituzumab as second line therapy in Triple Negative Breast Cancer



Sacituzumab as second line therapy in Triple Negative Breast Cancer

Tung, ASCO 2024

Thoughts about biomarkers in breast cancer

- Important in directing therapy
- May provide prognostic information
- May predict for toxicity
- Limited by sampling
- Functional imaging provides pharmacokinetic information
  - In assessing response, the threshold for efficacy or lack thereof is likely to be different for every agent and disease site
