**HCC**

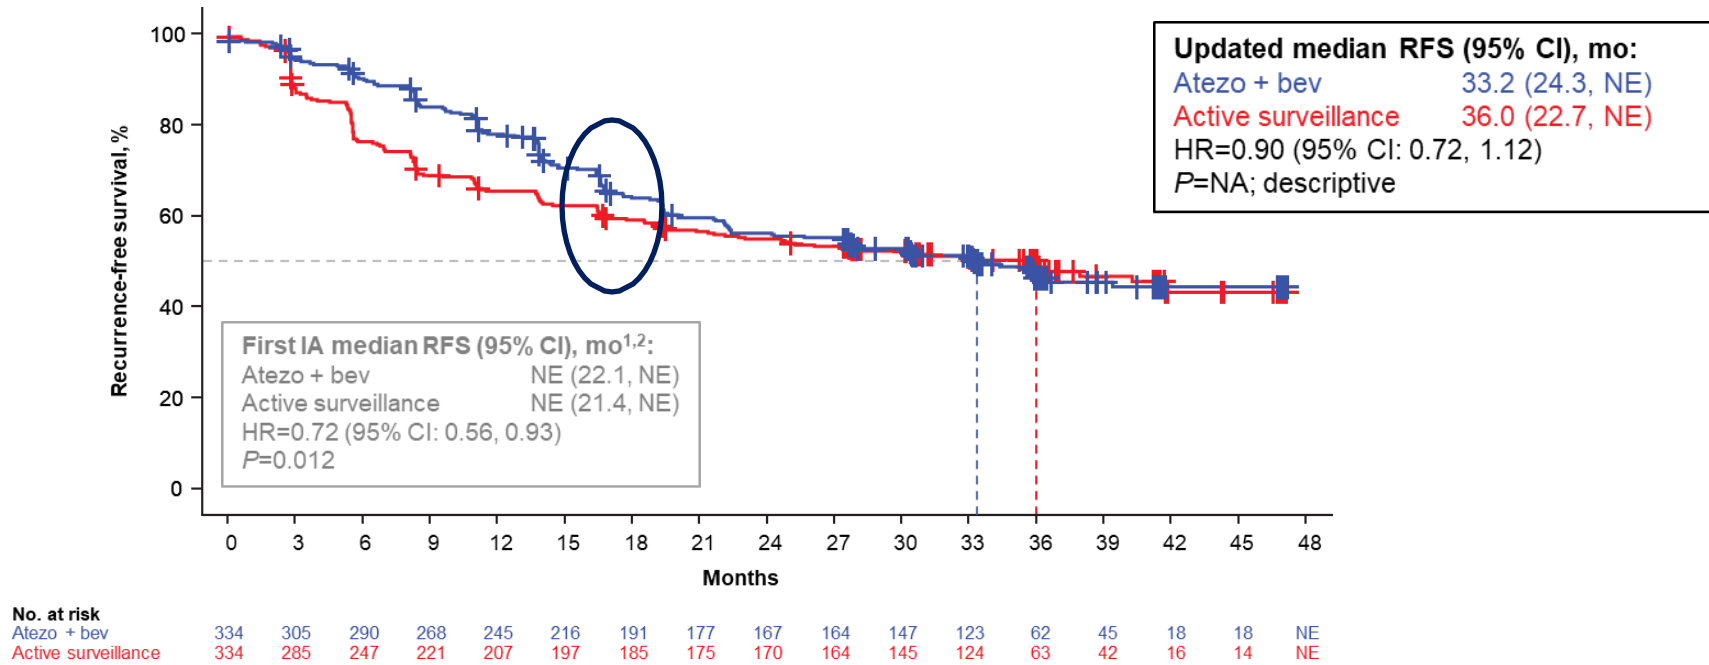

# IMbrave050 – study population

High risk HCC post resection or curative ablation

- >80% Asian, Male
- Hep B most common aetiology of liver disease
- BCLC stage A > 85%
- Tumour size > 5cm in 48.9%

# Updated RFS analysis @ 35 mo median follow up: negative

**CLINICAL PRESENTATION**

Potentially resectable or transplantable by tumor burden; and operable by performance status or comorbidity<sup>w</sup>

**SURGICAL ASSESSMENT<sup>x,y,z</sup>**

**Resection Criteria**

- Child-Pugh Class A, B<sup>aa</sup>
- No portal hypertension
- Suitable tumor location
- Adequate liver reserve
- Suitable liver remnant

**Transplant Criteria**

- United Network for Organ Sharing (UNOS) criteria<sup>z,bb</sup>
  - ▶ AFP level ≤1000 ng/mL and patient has a tumor 2–5 cm in diameter or 2–3 tumors 1–3 cm in diameter
  - ▶ No macrovascular involvement
  - ▶ No extrahepatic disease
- Extended criteria<sup>bb</sup>

Met resection ± transplant criteria<sup>y</sup>

Met transplant criteria only  
• Refer to liver transplant center<sup>cc</sup>  
• Bridge therapy as indicated<sup>dd</sup>

**TREATMENT<sup>r</sup>**

- Resection<sup>s,z,ee</sup> (preferred)
- Transplant<sup>z</sup> (preferred) (if met transplant criteria)
  - ▶ Refer to liver transplant center<sup>cc</sup>
  - ▶ Bridge therapy as indicated<sup>dd</sup>
- Locoregional therapy<sup>ff</sup>
  - ▶ Ablation<sup>ee,gg</sup> (preferred)
  - ▶ Arterially directed therapies
  - ▶ Radiation therapy (RT)<sup>hh</sup>

Transplant →  
If deemed ineligible for transplant,<sup>a,r,s,ii</sup> see [HCC-5](#)

**SURVEILLANCE**

- Imaging<sup>a,ij,kk</sup> every 3–6 mo for 2 y, then every 6 mo
- AFP<sup>a,kk</sup> every 3–6 mo for 2 y, then every 6 mo
- See relevant pathway ([HCC-2](#) through [HCC-6](#)) if disease recurs
- Refer to a hepatologist for a discussion of antiviral therapy for carriers of hepatitis if not previously done

<sup>a</sup> [Principles of Imaging \(HCC-A\)](#).

<sup>r</sup> [Principles of Mixed HCC-CCA \(HCC-C\)](#).

<sup>s</sup> [Principles of Pathology \(HCC-D\)](#).

<sup>w</sup> Patients should be evaluated by a multidisciplinary team.

<sup>x</sup> Discussion of surgical treatment with patient and determination of whether patient is amenable to surgery.

<sup>y</sup> In patients being considered for surgery, patients with Child-Pugh Class A or highly selected patients with Child-Pugh Class B liver function, who fit UNOS criteria/extended criteria ([www.unos.org](http://www.unos.org)) and are resectable could be considered for resection or transplant. There is controversy over which initial strategy is preferable to treat such patients. These patients should be evaluated by a multidisciplinary team.

<sup>z</sup> [Principles of Resection and Transplant \(HCC-F\)](#).

<sup>aa</sup> In highly selected patients with Child-Pugh Class B liver function with limited resection.

<sup>bb</sup> Extended criteria/downstaging protocols are available through UNOS. See [https://optn.transplant.hrsa.gov/media/1200/optn\\_policies.pdf#nameddest=Policy\\_09](https://optn.transplant.hrsa.gov/media/1200/optn_policies.pdf#nameddest=Policy_09).

<sup>cc</sup> Mazzaferro V, et al. N Engl J Med 1996;334:693-700.

<sup>dd</sup> Many transplant centers consider bridge therapy for transplant candidates (See Discussion).

<sup>ee</sup> Adjuvant therapy with atezolizumab + bevacizumab may be considered in patients at high risk for recurrence (defined as size >5 cm, >3 tumors, macrovascular invasion or microvessel invasion on histology, or grade 3/4 histology based on the trial) on a case by case basis. Interim analysis of the phase III study of adjuvant therapy with atezolizumab + bevacizumab for 12 months in patients at high risk for recurrence after resection or ablation showed a higher rate of recurrence-free survival at 12 months compared to active surveillance, though overall survival benefit has not been established. Qin S, et al. Lancet 2023;402:1835-1847. Atezolizumab and hyaluronidase-tqjs subcutaneous injection may be substituted for IV atezolizumab. Atezolizumab and hyaluronidase-tqjs has different dosing and administration instructions compared to atezolizumab for intravenous infusion. An FDA-approved biosimilar is an appropriate substitute for atezolizumab.

<sup>ff</sup> [Principles of Locoregional Therapy \(HCC-G\)](#).

<sup>gg</sup> In well-selected patients with small, properly located tumors, ablation should be considered as definitive treatment in the context of a multidisciplinary review.

<sup>hh</sup> [Principles of Radiation Therapy \(HCC-H\)](#).

<sup>ii</sup> Consider biopsy if imaging is not consistent or to confirm imaging diagnosis if it does not meet AASLD or LIRADS-5 criteria. See [Principles of Core Needle Biopsy \(HCC-B\)](#).

<sup>ij</sup> Multiphasic abdomen MRI or multiphase CT scans for liver assessment, CT chest, and CT/MRI pelvis.

<sup>kk</sup> Surveillance imaging and AFP should continue for at least 5 years; and thereafter screening is dependent on HCC risk factors.

## Advanced or Metastatic HCC

**CheckMate 9DW Trial:** Phase III 668 pts: Nivo+Ipi to lenvatinib or sorafenib

- OS 23.7 x 20.6 months (HR 0.79; 95% CI 0.65–0.96; p=0.0180).
- ORR 36% x 13%.

	Atezolizumab + Bevacizumab	Tremelimumab & Durvalumab	Nivolumab + Ipilimumab
Response rate	30%	20.1%	36%
Overall survival (median)	19.2 months	16.4 months	23.7 months
PFS ( median)	6.8 months	3.78 months	9.1 months

[NCCN Guidelines Index](#)  
[Table of Contents](#)  
[Discussion](#)

### PRINCIPLES OF SYSTEMIC THERAPY<sup>a,b,c</sup>

#### First-Line Systemic Therapy

##### Preferred Regimens

- Atezolizumab<sup>d</sup> + bevacizumab (category 1)<sup>e,f,g,1</sup>
- Tremelimumab-actl + durvalumab (category 1)<sup>f,2</sup>

##### Other Recommended Regimens

- Durvalumab (category 1)<sup>f,2</sup>
- Lenvatinib (category 1)<sup>3,4</sup>
- Sorafenib (category 1)<sup>5,6</sup>
- Tislelizumab-jsgr (category 1)<sup>f,7</sup>
- Pembrolizumab (category 2B)<sup>f,8</sup>

##### Useful in Certain Circumstances

- For *NTRK* gene-fusion positive tumors:
  - ▶ Repotrectinib (category 2B)<sup>9</sup>

#### Subsequent-Line Systemic Therapy if Disease Progression<sup>h,i,j</sup>

##### Options

- Cabozantinib (category 1)<sup>12</sup>
- Regorafenib (category 1)<sup>13</sup>
- Lenvatinib
- Sorafenib

##### Other Recommended Regimens

- Nivolumab + ipilimumab<sup>f,k,l,14-16</sup>
- Pembrolizumab<sup>f,m,n,o,17-19</sup>

##### Useful in Certain Circumstances

- Ramucirumab (AFP ≥400 ng/mL) (category 1)<sup>20</sup>
- Nivolumab<sup>f,m,n,p,21-24</sup>
- For MSI-H/dMMR tumors
  - ▶ Dostarlimab-gxly (category 2B)<sup>f,m,n,q,25</sup>

# Metastatic Biliary Cancers

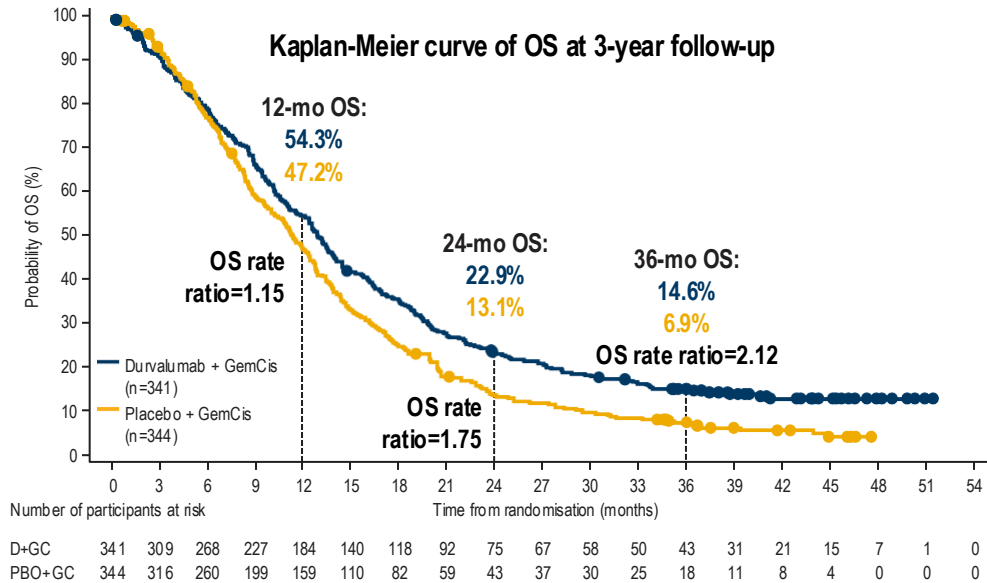

# TOPAZ-1 VS KEYNOTE 966

	TOPAZ 1 <sup>1</sup>	Keynote 966 <sup>2</sup>
Median OS	12.9 vs 11.3 (HR 0.74 from 0.80 in FA)	12.7 vs 10.9 (HR 0.86 from 0.83 in FA)
ORR	26.7 vs 18.7 FA (55 % vs 40% in LTS)	28.7 vs 28.7 but DOR was 8.3 vs 6.9
N	685	1069
Median F/u	42.9 months	36.6 months

**Primary Treatment for Unresectable and Metastatic Disease**

<u>Preferred Regimens</u>	<u>Other Recommended Regimens</u>	<u>Useful in Certain Circumstances</u>
<ul style="list-style-type: none"> <li>• Durvalumab + gemcitabine + cisplatin (category 1)<sup>e,f,g,4</sup></li> <li>• Pembrolizumab + gemcitabine + cisplatin (category 1)<sup>f,g,5</sup></li> </ul>	<ul style="list-style-type: none"> <li>• Gemcitabine + cisplatin (category 1)<sup>6</sup></li> <li>• Capecitabine + oxaliplatin</li> </ul> <p><b>FOLFOLX</b></p> <ul style="list-style-type: none"> <li>• Gemcitabine + albumin-bound paclitaxel</li> <li>• Gemcitabine + capecitabine</li> <li>• Gemcitabine + oxaliplatin</li> <li>• Single agents: <ul style="list-style-type: none"> <li>▶ 5-fluorouracil</li> <li>▶ Capecitabine</li> <li>▶ Gemcitabine</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Targeted therapy (<a href="#">BIL-C 3 of 5</a>)</li> </ul>

**Subsequent-Line Therapy for Biliary Tract Cancers if Disease Progression<sup>h</sup>**

<u>Preferred Regimens</u>	<u>Other Recommended Regimens</u>	<u>Useful in Certain Circumstances</u>
<ul style="list-style-type: none"> <li>• FOLFOX<sup>7</sup></li> </ul>	<ul style="list-style-type: none"> <li>• FOLFIRI<sup>8</sup></li> <li>• Liposomal irinotecan + fluorouracil + leucovorin (category 2B)<sup>9</sup></li> <li>• Regorafenib (category 2B)<sup>10</sup></li> <li>• See also: Preferred and Other Recommended Regimens for Unresectable and Metastatic Disease above</li> </ul>	<ul style="list-style-type: none"> <li>• Targeted therapy (<a href="#">BIL-C 3 of 5</a>)</li> <li>• Nivolumab (category 2B)<sup>f,g,11</sup></li> </ul>

<sup>a</sup> Order does not indicate preference.

<sup>e</sup> Durvalumab + gemcitabine + cisplatin is also a recommended treatment option for patients who developed recurrent disease >6 months after surgery with curative intent and >6 months after completion of adjuvant therapy.

<sup>f</sup> See [NCCN Guidelines for Management of Immunotherapy-Related Toxicities](#).

<sup>9</sup> For patients who have not been previously treated with a checkpoint inhibitor when used as subsequent-line therapy because there is a lack of data for use of immunotherapy in patients who have previously been treated with a checkpoint inhibitor.

<sup>h</sup> Treatment selection depends on clinical factors including previous treatment regimen/agent, somatic molecular testing results, and extent of liver dysfunction.

Thanks For The Attention!
